

**INCIDENT MANAGEMENT SITUATION REPORT
FRIDAY, FEBRUARY 18, 2005 – 1000 MST
NATIONAL PREPAREDNESS LEVEL 1**

CURRENT SITUATION:

Initial attack activity was light nationally with 956 new fires reported for the week. Three new large fires were reported for the week.

SOUTHERN AREA INCIDENTS:

SONNY GILE, Oklahoma Division of Forestry. This fire is twelve miles northeast of Sallisaw, OK in timber. No further information was received.

INCIDENT NAME	ST	UNIT	SIZE	% CTN	EST CTN	TOTL PERS	CRW	ENG	HELI	STRC LOST	\$\$\$ CTD
SONNY GILE	OK	OKS	120	88	2/18	5	0	2	0	0	NR
THE CORBETT 3	FL	FLS	450	100	---	0	0	0	0	0	1K
XERISCAPE	FL	FLS	100	100	---	3	0	1	0	0	3K

FLS = Florida Division of Forestry

OUTLOOK:

Weather Discussion: Dry high pressure will remain over the Southeast through early Sunday. During the first part of next week showers and cloud cover will move over portions of the Carolinas and the northern Appalachians. Most of Florida will be dry through the end of next week. The driest portion of the West will be over the Pacific Northwest with some showers over the Great Basin and Southwest.

Geographic Area Weather	High Temperatures	Minimum Relative Humidity	Wind
Southern California Cloudy with periods of rain and high elevation snow. The snow level will be around 5,000 feet.	35 to 55 mountains. 55 to 65 valleys. 50 to 58 upper deserts. 58 to 65 lower deserts.	60 to 80%.	Southeast to southwest 10 to 20 mph with higher gusts.

FIRE NOT SCOUTED AND SIZED UP

Watchout Situation #1 comes up during initial attack and every time resources arrive at a fire.

- Before taking action on the fire, the following considerations must be addressed:
 - Can you personally observe the fire or must you use scouts? Describe ways you can scout and size up a fire.
 - Do you know the location of the fire perimeter? Discuss situations in which the fire perimeter may not be obvious. (Spotty fires, etc.)
 - Do you know the direction of fire spread? When isn't the direction of fire spread obvious? (Wind shifts, spotty fires, etc.)
 - Does the direction of fire spread increase risk? Talk about situations where you may have to approach the head of the fire. (Hiking down from a helispot, approaching from an existing road, switching winds, etc.)
 - Do you know the fuels and their condition? What kind of information will you assume from what you already know about fuel types? (Spot fires in fir, extreme fire potential in flashy fuels, etc.)

- Continued from above...
 - Do topographic hazards exist? What can you assume from what kind of terrain the fire covers? (Slope, chimneys, aspect, etc.)
 - Does enough information exist to establish a plan of attack? When do you have enough information to begin fighting fire? What do you need to know?
 - Do other dangers exist? Have you talked about factors specific to the area you are working in? (Hunters in the woods, drought, snag patches, etc.)

- To reduce the risks:
 - Post lookouts until the fire is sized up and escape routes and safety zones are established.
 - Retreat if the situation is too complex. Review fires where you had to wait until the area in which you were assigned to work was scouted and sized up before you were allowed onto the fireline.
