

**National Interagency Coordination Center  
Incident Management Situation Report  
Thursday, June 10, 2010 – 0530 MT  
National Preparedness Level 2**

**National Fire Activity**

Initial attack activity:	Light (65 new fires)
New large fires:	5 (*)
Large fires contained:	1
Uncontained large fires: **	12
Area Command Teams committed:	0
NIMOs committed:	0
Type 1 IMTs committed:	0
Type 2 IMTs committed:	3

Nationally, there are 32 large fires being managed to achieve multiple objectives.

\*\* Uncontained large fires include only fires being managed under a full suppression strategy. \*\*

[Link](#) to Geographic Area daily reports.

Department of Interior personnel are assigned to several locations in the Gulf of Mexico to assess and mitigate impacts resulting from the Deepwater Horizon oil spill.

- A total of 377 Fish and Wildlife Service personnel are assigned to Delta, Breton and Bon Secour National Wildlife Refuges, as well as Houma, LA and Mobile, AL.
- A total of 350 National Park Service personnel are assigned to Gulf Islands National Seashore, Jean Lafitte Park and Preserve, Everglades National Park, Dry Tortugas, Biscayne National Park, De Soto National Memorial and Big Cypress National Preserve.

**Alaska Area (PL 3)**

New fires:	17
New large fires:	2
Uncontained large fires:	7
Type 2 IMTs committed:	2

**Eagle Trail**, Tok Area Forestry, Alaska DOF. IMT 2 (Allen). One mile south of Tanacross, AK. Spruce. Minimal fire activity. Traffic delays along the Alaska Highway. Numerous structures threatened. Precipitation occurred over the fire area yesterday.

**Delta Complex** (4 fires), Delta Area Forestry, Alaska DOF. IMT2 (Paul). Twenty miles north of Delta, AK. Spruce. Smoldering. Numerous structures threatened.

**Applegate**, Tanana Zone, BLM. Limited perimeter control incident. Started on state land 25 miles northeast of Manley Hot Springs, AK. Black spruce, brush and grass. Creeping and smoldering. Numerous structures threatened.

**Toklat 2**, Tanana Zone, BLM. Limited perimeter control incident. Started on state land 25 miles southwest of Nenana, AK. Black spruce and tundra. Creeping and smoldering. Numerous structures threatened.

**Dempsey Creek**, Upper Yukon Zone, BLM. Managed for resource benefit objectives. Eighty miles east of Fort Yukon, AK. Hardwood slash and brush. Active fire behavior with running and torching. Last report unless significant activity occurs.

**Eklutna**, Mat-Su Area, Alaska DOF. Thirty-seven miles northeast of Anchorage, AK. Timber and grass. Creeping and smoldering.

**Niakogon Mtn**, Tanana Zone, BLM. Confine/contain incident. Fifty miles north of Brooks Range, AK. Tundra and grass. No further information received. Last report unless significant activity occurs.

**Christian River**, Upper Yukon Zone, BLM. Fifty-six miles north of Fort Yukon, AK. Spruce and timber litter. Smoldering.

### Southwest Area (PL 3)

New fires: 11  
 New large fires: 2  
 Uncontained large fires: 4  
 Type 2 IMTs committed: 1

**Horseshoe**, Coronado NF. IMT 2 (McBratney). Five miles south of Portal, AZ. Timber. Active fire behavior.

**Aspen**, Gila NF. Twenty-six miles northwest of San Lorenzo, NM. Timber. Backing fire with isolated running and group tree torching.

**Boggy**, Apache-Sitgreaves NF. IMT 2 (Small). Eighteen miles southwest of Alpine, AZ. Timber. Creeping and smoldering.

**Paradise**, Apache-Sitgreaves NF. Sixteen miles southwest of Alpine, AZ. Timber. Creeping fire.

**Predictive Services Discussion: Significant fire potential is expected in the Southwest and portions of Colorado today due to high winds and hot, dry weather.** Scattered showers and thunderstorms are on tap for the Alaska Interior with the warmest and driest conditions in the north. Gusty winds will continue today over the leeward portions of Hawaii.

[Link](#) to Predictive Services Outlook products.

Today's discussion is from the  
Entrapment Category.

## FIRE SHELTER DEPLOYMENT

Firefighters must never rely on fire shelters, but instead should depend on well-defined and pre-located escape routes and safety zones. However, if the need for shelter deployment should ever arise, it is imperative that the firefighter knows how to deploy and use the shelter.

- Don't think of your fire shelter as a tactical tool.
- Recognize when deployment is your only option. When considering escape, remember that you can hold your breath for only about 15 seconds while running through flames or superheated air.
- If time runs out while attempting to escape, get on the ground before the flame front arrives and finish deploying on the ground. Death is almost certain if the fire catches a person off the ground. (The optimal survival zone with or without a shelter is within a foot of the ground.) Once entrapped, the highest priority is to protect the lungs and airways.
- When deploying, remove packs and place them away from the deployment area.
- Even though deploying your shelter is a last resort, time is critical when entrapped. Play it safe; give yourself ample time to deploy. Failure to adequately anticipate the severity and timing of the burnover and failure to utilize the best location and proper deployment techniques contributed to the fatalities and injuries on the Thirty Mile incident. Don't let the cost of opening a shelter become a factor in your decision.
- Before passing through superheated gases, try to close the front of your shroud. You can take your shelter out of the plastic bag and use it for a heat shield to pass quickly through a hot area. If you use the shelter in this way, don't drop it or allow it to snag on brush. Remember that your lungs are still vulnerable.
- If flames contact the shelter, the glass/foil fabric heats up more rapidly. If flame contact is prolonged, spots of aluminum foil can melt or tear away, reducing protection. Even if this happens, it is still safer inside the shelter. Your flame-resistant clothing becomes your backup protection. It's even more critical to keep your nose pressed to the ground and stay in your shelter.
- Remember, direct contact with flames or hot gases is the biggest threat to your shelter. It is vital to deploy in a spot that offers the least chance of such contact. The heavier the fuels, the bigger your fuel break needs to be.
- Remember, once you commit yourself to the shelter, stay there. No matter how bad it gets inside, it is usually much worse outside. If you panic and leave the shelter, one breath of hot, toxic gases could damage your lungs. Suffocation may follow. Most firefighters were killed as a result of heat-damaged airways and lungs, not by external burns. Protect your airways and lungs at all costs by keeping your face close to the ground and staying in your shelter.
