

**National Interagency Coordination Center  
Incident Management Situation Report  
Friday, March 23, 2012 – 0800 MT  
National Preparedness Level 1**

**National Fire Activity (Weekly Total)**

Initial attack activity: Light (1,255 new fires)  
 New large fires: 21 (\*)  
 Large fires contained: 18  
 Uncontained large fires: \*\* 3  
 Area Command Teams committed: 0  
 NIMOs committed: 0  
 Type 1 IMTs committed: 0  
 Type 2 IMTs committed: 0

Nationally there are no large fire being managed to achieve multiple objectives.

\*\* Uncontained large fires include only fires being managed under a full suppression strategy.

[Link](#) to Geographic Area daily reports.

**Eastern Area (PL 1)**

New fires: 455  
 New large fires: 9  
 Uncontained large fires: 2

\* **McKinley TWP #4**, Minnesota DNR. Eighteen miles west of Pine River, MN. Grass. Minimal fire activity.

\* **Railroad**, Indiana Dunes National Lakeshore. Gary, IN. Hardwood litter and grass. No further information received.

**Predictive Services Discussion:** A slow moving upper low over Texas will drift toward the Ohio Valley over the weekend before moving offshore early next week. Showers and thunderstorms, producing locally heavy rain and possible flooding, will develop from the Mississippi Valley to the East coast. Meanwhile, a deepening trough in the Pacific will push a cold front across the West, bringing rain and snow to the coast Friday and Saturday before crossing the Great Basin early in the week. Another front will approach the West coast Tuesday. Areas of strong, gusty winds are possible across the High Plains from Texas to the Dakotas heading into the weekend.

Predictive Services Outlook products: <http://www.predictiveservices.nifc.gov/outlooks/outlooks.htm>

Today's discussion is from the  
Aviation Category.

**Scenario**  
Scenarios are situations that can arise on a Wildland Fire or Aviation incident and are meant to add a realistic setting for the application of Today's Safety Discussion.

### WORKING WITH HELICOPTER DROPS

Consider the following questions when you have a helicopter with a bucket working in your area:

If the helicopter is a Type 1 increase the distance of standby place from the drop zone.  
Use helicopter drops to knock down or secure a fire area that poses a direct imminent threat to escaping control lines or climbing up ladder fuels.

- Do you have good communications?
- Does the pilot have a clear understanding of the target?
- Are trees and snags in the drop zone?
- Are ground crews clear of the area?
- What are the winds doing?
- What is the turnaround time for the helicopter?
  
- Are people on the ground aware of the effects of the helicopter's rotorwash?
- Give feedback to the pilot about drop accuracy. Be honest and constructive.
- Be aware that helicopter performance capabilities may be significantly reduced at high altitudes and/or high temperatures.
