

**National Interagency Coordination Center
Incident Management Situation Report
Tuesday, June 5, 2012 – 0530 MT
National Preparedness Level 2**

National Fire Activity

Initial attack activity: Light (146 new fires)
 New large fires: 6 (*)
 Large fires contained: 5
 Uncontained large fires: ** 11
 Area Command Teams committed: 0
 NIMOs committed: 0
 Type 1 IMTs committed: 1
 Type 2 IMTs committed: 3

** Uncontained large fires include only fires being managed under a full suppression strategy.

A Neptune Aviation P2V air tanker on contract to the United States Forest Service crashed June 3 while working on the White Rock fire northeast of Caliente, NV. Both crew members on board were fatally injured. The firefighting community extends its condolences to the families and friends of the deceased.

Southwest Area (PL 3)

New fires: 9
 New large fires: 0
 Uncontained large fires: 3
 Type 1 IMTs committed: 1

Whitewater-Baldy, Gila NF. IMT 1 (Sciacca). Fifteen miles east of Glenwood, NM. Timber. Moderate fire behavior. Structures threatened.

Gladiator, Prescott NF. Started on state land one mile east of Crown King, AZ. Timber. Smoldering.

Montezuma, Papago Agency, BIA. Twenty miles southeast of Sells, AZ. Timber and grass. Creeping and smoldering. Structures threatened.

Predictive Services Discussion: A late spring trough will push a cold front through the northern Rockies and the Great Basin. Strong winds will develop ahead of the front producing critical fire weather conditions over the Great Basin, the Southwest and west slope of the Rockies. Behind the front, rain and a few thunderstorms will develop from northern California to Montana with some snow at the higher elevations. Windy conditions will also develop in the northern and central Plains. Scattered showers and thunderstorms will develop along a front through the Gulf states. In Alaska, warmer and drier conditions will continue over the Interior and the north, while scattered showers continue along the south coast.

<http://www.predictiveservices.nifc.gov/outlooks/outlooks.htm>

**Today's discussion is from the
Entrapment Category.**

VEHICLE ENTRAPMENT

If you find yourself in a fire entrapment situation where a shelter deployment is not possible, using a vehicle for refuge may be an option. The following are some considerations for a vehicle entrapment:

- Park the vehicle in an area void of vegetation.
- Burn out around the vehicle if there is time.
- Park behind a natural barrier or structure. Consider that a structure could become involved which could severely impact nearby exposures/vehicles ([Harris Fire, SoCal, 2007](#)).
- Do not park on the downhill side of a road or under power lines or over-hanging vegetation.
- Stay out of saddles and draws.
- Position the vehicle in a direction that provides the area occupied by crew personnel the maximum protection from an approaching flame front.
- Set the parking break, leave the motor running at high RPM, and keep the vehicle lights on.
- Roll up the windows and do not lock the doors since someone else might need to get in.
- Cover windows with fire shelters with reflective material placed against window.
- You must protect your airway; remain as low in the vehicle as possible, and use a dry bandana to cover your nose and mouth.
- Expect the following conditions if you are trapped inside the vehicle:
 - Temperatures may reach over 200 degrees Fahrenheit.
 - Smoke and sparks may enter the vehicle.
 - Plastic parts may start to melt and give off toxic gases.
 - Windows may start to crack.
 - Exposed skin may receive radiant heat burns.
- If the vehicle catches fire, or windows blow out, and you must exit the vehicle before the fire has passed, then:
 - Each crewmember should cover themselves with a fire shelter.
 - Exit the vehicle from the side away from the greatest heat.
 - Stay together and get as low to the ground as possible, moving away from the vehicle.
 - Deploy your shelter in a safe area.
