Incident Management Situation Report
Saturday, June 9, 2012 – 0530 MT
National Preparedness Level 2**

National Fire Activity

Initial attack activity: Light (84 new fires)
 New large fires: 2 (*)
 Large fires contained: 5
 Uncontained large fires: ** 12
 Area Command Teams committed: 0
 NIMOs committed: 0
 Type 1 IMTs committed: 1
 Type 2 IMTs committed: 3

** Uncontained large fires include only fires being managed under a full suppression strategy.

Southwest Area (PL 3)

New fires: 4
 New large fires: 0
 Uncontained large fires: 5
 Type 1 IMTs committed: 1

Whitewater-Baldy, Gila NF. IMT 1 (Sciacca). Fifteen miles east of Glenwood, NM. Timber. Active fire behavior with long-range spotting. Structures threatened.

Gladiator, Prescott NF. Started on state land one mile east of Crown King, AZ. Timber. Smoldering. Road closures in effect.

Montezuma, Papago Agency, BIA. Twenty miles southeast of Sells, AZ. Timber and grass. Smoldering. Structures threatened.

Bear Springs, Santa Fe NF. Five miles east of Ponderosa, NM. Brush and hardwood slash. Minimal fire activity.

Colorado Peak, Santa Fe NF. Ten miles northwest of Santa Fe, NM. Brush and hardwood slash. Minimal fire activity.

EAQ – Eglin Air Force Base

Predictive Services Discussion: A strong upper trough over the West will push a cold front through the Great Basin and the northern Rockies. Critical fire weather conditions from strong winds and low relative humidity will develop over much of the Great Basin, the Southwest, and the central and southern Rockies. Scattered showers will move through the Northwest and the Northern Rockies as cooler air filters into the region. High pressure will slide off the East Coast, bringing warm and humid conditions to much of the eastern half of the nation. Gusty winds will develop over the Plains. Showers and a few thunderstorms will develop over the Gulf Coast states and across the Great Lakes. In Alaska, isolated thunderstorms will develop over the Interior and showers will cross the south coast.

<http://www.predictiveservices.nifc.gov/outlooks/outlooks.htm>

**Today's discussion is from the
Fireline Safety Category.**

FIRE NOT SCOUTED AND SIZED UP

Watchout Situation #1 comes up during initial attack and **every time** resources arrive at a fire.

● Before taking action on the fire, the following considerations must be addressed:

- Can you personally observe the fire or must you use scouts? Describe ways you can scout and size up a fire.
 - Do you know the location of the fire perimeter? Discuss situations in which the fire perimeter may not be obvious. (Spotty fires, etc.)
 - Do you know the direction of fire spread? When isn't the direction of fire spread obvious? (Wind shifts, spotty fires, etc.)
 - Does the direction of fire spread increase risk? Talk about situations where you may have to approach the head of the fire. (Hiking down from a helispot, approaching from an existing road, switching winds, etc.)
 - Do you know the fuels and their condition? What kind of information will you assume from what you already know about fuel types? (Spot fires in fir, extreme fire potential in flashy fuels, etc.)
 - Are there aerial resources that can act as lookouts?
-
- Do topographic hazards exist? What can you assume from what kind of terrain the fire covers? (Slope, chimneys, aspect, etc.)
 - Does enough information exist to establish a plan of attack? When do you have enough information to begin fighting fire? What do you need to know?
 - Do other dangers exist? Have you talked about factors specific to the area you are working in? (Hunters in the woods, drought, snag patches, etc.)

● To reduce the risks:

- Post lookouts until the fire is sized up and escape routes and safety zones are established.
- Retreat if the situation is too complex. Review fires where you had to wait until the area in which you were assigned to work was scouted and sized up before you were allowed onto the fireline.
