

**National Interagency Coordination Center
Incident Management Situation Report
Wednesday, October 17, 2012 – 0530 MT
National Preparedness Level 1**

National Fire Activity

Initial attack activity: Light (51 new fires)
 New large fires: 0 (*)
 Large fires contained: 0
 Uncontained large fires: ** 5
 Area Command Teams committed: 0
 NIMOs committed: 0
 Type 1 IMTs committed: 0
 Type 2 IMTs committed: 1

** Uncontained large fires include only fires being managed under a full suppression strategy.

Total	57	708,041	16	55	7	671

This table does not include fires reported in the large fire section of this report. Updated weekly.

Predictive Services Discussion: A strong storm system will move across the northern Plains, dragging a cold front to the Mississippi Valley. Cool high pressure will settle over the western half of the nation. Scattered showers and thunderstorms will form along and ahead of the front through the Mississippi and Ohio Valleys as well as the Great Lakes region. Warm and windy conditions will develop from the central Gulf states and along the Appalachians while mild conditions continue over the eastern seaboard.

<http://www.predictiveservices.nifc.gov/outlooks/outlooks.html>

Today's discussion is from the
Fireline Safety Category.

DOWNHILL FIRELINE CONSTRUCTION CHECKLIST

Downhill fireline construction is hazardous in steep terrain, fast-burning fuels, or rapidly changing weather. Downhill fireline construction should not be attempted unless there is no tactical alternative. When building downhill fireline, the following is required:

- Crew supervisor(s) and fireline overhead will discuss assignments prior to committing crew(s). Responsible overhead individual (TFLD or ICT4 qualified or better) will stay with resources until the job is completed.
- Decision will be made after proposed fireline has been scouted by supervisor(s) of involved crew(s).
- LCES will be coordinated for all personnel involved.
 - Crew supervisor(s) is in direct contact with lookout who can see the fire.
 - Communication is established between all crews.
 - Ensure rapid access to safety zone(s) in case fire crosses below crew(s).
- Direct attack will be used whenever possible; if not possible, the fireline should be completed between anchor points before being fired out.
- Fireline will not lie in or adjacent to a chute or chimney.
- Starting point will be anchored for crew(s) building fireline down from the top.
- Bottom of the fire will be monitored; if the potential exists for the fire to spread, action will be taken to secure the fire edge.
- Can fire be carried with you?
