

INCIDENT MANAGEMENT SITUATION REPORT  
WEDNESDAY SEPTEMBER 14, 1994 - 0530 MDT  
NATIONAL PREPAREDNESS LEVEL IV

Current Situation: No major runs or significant activity was reported on any of the large fires. Rain, cooler temperatures and higher humidities continued to assist suppression efforts on many of the large fires.

The final (7th) Battalion of military firefighters returns to Ft. Riley, KS today. The remaining military resources are six, CH-47 helicopters assigned to the Payette NF. Over four thousand military personnel were mobilized for fire suppression assistance since July 31st. Eight MAFFS C-130 aircraft were released yesterday, after delivering in excess of five million gallons of retardant in 11 western states.

Eastern Great Basin Area Large Fires:

CORRAL CREEK/BLACKWELL COMPLEX, Payette NF. A Type I Incident Management Team (Monahan) is assigned. Helicopter support is being provided by the A/6-158th Aviation Unit, USAR. Fire activity was very low due to cooler temperatures and higher relative humidity. A Type I Incident Management Team (Wands) is scheduled to take over the fire today. No other significant activity occurred.

IDAHO CITY COMPLEX, Boise NF. A Type I Incident Management Team (Maupin) is assigned. The complex consists of the BANNOCK, BEAR RIVER, RABBIT CREEK, NORTH FORK and STAR GULCH fires. Good progress was made securing the 1,000 acre slopover in the South Fork Payette River. Slopovers in Ten Mile and Wapiti Creeks are still requiring handline construction. The fire received .25 inches of rain on the south end, but none on the north end where the fire remains active. Acreage increases are due to better mapping.

CHICKEN COMPLEX, Payette NF. A Type I Incident Management Team (Birch) is assigned. The fire increased 1,690 acres mainly on the southern perimeter. Crews were able to suppress hotspots along the west flank with help from rain showers and cooler temperatures. Crews are working to stop the advance near the Davis Ranch.

THUNDERBOLT, Boise NF. A Type II Incident Management Team (Martin) is assigned. The fire received .10 inches of rain through the early afternoon. Helicopters worked on hotspots above Johnson Creek. Mop-up and rehabilitation continued and crews completed construction of a helispot to improve access to the west flank. Line preparation was completed on the southeast flank for a possible burnout operation. The increased acreage was due to better mapping.

TROJAN II, Uinta NF. A Type II Incident Management Team (Butler) is assigned. Crews have containment lines along the bottom and east flank of the fire. Patches of timber within the perimeter of the fire are holding heat and flaring up occasionally. Helicopters with buckets kept them from becoming major problems. Heavy emphasis will be put on these patches today.

TIN CUP COMPLEX, Caribou NF. Burnout operations continued on the north and west flanks. Ping pong operations are on hold.

#### Northern Rockies Area Large Fires:

SMITH CREEK, Gallatin NF. A Type II Incident Management Team (Cowin) is assigned. Crews are working to complete the line. Unburned fuel in the southeast and northeast divisions are slowing line construction. Mop-up work is continuing near private structures. Numerous unburned islands of timber within the fire continue to pose a threat to control lines.

WINDY POINT, Lewistown District, BLM. A Type II Incident Management Team (Bosworth/Stone) is assigned. Line construction on the west side of the fire was completed. Containment of the east flank continues to be difficult due to steep terrain. Access to the east flank requires strong helicopter support due to very limited road access.

ROBINSON, Yellowstone NP. Transitioning to a Type II Team (Johnson) today.

INCIDENT NAME	UNIT	ST	SIZE	% CTN	EST CTN	TOTAL PERS	CRW	ENG	HELI	STRUC LOST	EST\$ LOSS	EST COST

#### Northwest Area Large Fires:

TWIN LAKES, Wallowa-Whitman NF. A Type I Incident Management Team (Liebersbach) and a Type II Incident Management Team (Duke) are assigned. Mop-up continues in all divisions excluding the wilderness. Some flare-ups occurred in the interior and were suppressed by helicopter water drops. Some spot and ground fires occurred along the perimeter. Rehabilitation efforts are continuing. Light rain was scattered across the fire. Duke's Team will complete transitioning out today.

INCIDENT NAME	UNIT	ST	SIZE	% CTN	EST CTN	TOTAL PERS	CRW	ENG	HELI	STRUC LOST	EST\$ LOSS	EST COST
TWIN LAKES	WWF	OR	19,460	95	9/14	1,424	48	26	9	0	UNK	7.9M

Alaska Incidents:

KOYUKUK FLOOD, Alaska State. A Type I Incident Management Team (Johnson) and a Type II Incident Management Team (Abbott) are assigned. The villages of Hughes, Allakaket and Alatna have been affected by the floods. Two hundred fifty-two residents from these villages are being sheltered in Fairbanks. The Team is managing the efforts in Hughes to salvage property. A briefing for the Type I Team is being held this morning. A Federal Emergency Management Agency declaration was approved.

Outlook: A major, cool, upper level trough resides over nearly all of the western United States. An upper low has moved into central Wyoming, while high pressure is now building along the west coast. The Intermountain West is dominated by the cool moist upper trough. Showers and thundershowers will continue across Wyoming, Utah, Colorado, and eastern Montana.

Temperatures across the Intermountain West and Pacific Northwest will range in the 60's and 70's. California will have temperatures in the upper 60's on the coast to mid 90's inland. The desert southwest will be in the 60's in the mountains to near 100 in the deserts. Fire activity should be minimal over most of the west.
