

**INCIDENT MANAGEMENT SITUATION REPORT
FRIDAY JUNE 6, 2003 - 0530 MDT
NATIONAL PREPAREDNESS LEVEL 2**

CURRENT SITUATION:

Initial attack activity was light nationally with 57 new fires reported. One new large fire was reported and contained in the Northwest Area. Very high to extreme fire indices were reported in Alaska, Arizona, Colorado, Nevada, New Mexico, Oklahoma, Texas and Utah.

ALASKA AREA LARGE FIRES:

TOK RIVER, State of Alaska. A Type 2 Incident Management Team (Reed) is assigned. The fire is burning in black spruce, tundra and mixed hardwoods, five miles southeast of Tok, AK. Significant progress was made with mopup operations yesterday, minimal growth is expected.

INCIDENT NAME	ST	UNIT	SIZE	% CTN	EST CTN	TOTL PERS	CRW	ENG	HELI	STRC LOST	\$\$\$ CTD
TOK RIVER	AK	AKS	5995	80	6/8	535	16	15	7	0	2.4M

NORTHERN CALIFORNIA AREA LARGE FIRES:

LUHI, Hawaii Volcanoes National Park. This fire was started by lava from the Kilauea Volcano and is burning in grass, brush and rainforest on the Island of Hawaii. There has been no significant increase in fire size within the past six days. Resources continue to build fireline and mopup along fire perimeter.

LUHI	HI	HVP	4,980	80	6/7	79	3	0	3	0	40K

SOUTHWEST AREA LARGE FIRES:

DRY LAKES COMPLEX, Gila National Forest. A Fire Use Management Team (Rath) is assigned. This lightning caused Wildland Fire Use fire is 27 miles northwest of Silver City, NM and is being managed to accomplish resource objectives. The fire is burning in pinyon and ponderosa pine, brush and juniper. Active fire behavior and isolated torching was observed. Continued monitoring is planned for today.

APACHE, Santa Fe National Forest. This fire is burning in pinyon and ponderosa pine approximately three miles west of Barillas Peak, NM. The fire is in a confinement strategy. Continued securing and holding of control lines is planned for today.

OUTLOOK:

Weather Discussion: High pressure will remain in control of western weather today, keeping conditions dry and warm. Breezy wind will be in place across Idaho, Montana and the northern Plains as a storm drops into eastern Montana. The storm will produce showers and thunderstorms in Wyoming and the Dakotas. Showers will increase today across the southern half of Alaska, including central interior sections, as a strong low pressure system approaches the Kenai Peninsula. Another low pressure system moving along the southern Minnesota border will swing a front across the central states and into the lower Mississippi Valley.

Geographic Area Weather	High Temperatures	Minimum Relative Humidity	Wind
ALASKA AREA South-Central Cloudy with areas of rain and showers. Central Interior Mostly cloudy with scattered showers. Wet thunderstorms in the north Southwest Mostly cloudy	50s to low 60s Upper 50s to low 70s, warmest in southeast interior. 55 to 65	40% to 55% 32% to 45%, driest in southeast interior. 45%-60% or greater	Southeast 5 to 20mph. Winds to 30 mph on the Anchorage hillside and the Matanuska Valley. Southwest to west to 15mph South to 20 mph along the Alaska Range. Southeast to southwest 10 to 20 mph.
ROCKY MOUNTAIN AREA Scattered showers and thunderstorms east of the divide. Warm, dry and breezy in the west.	60-72 except 75-85 western Colorado.	15%-20% west and south, with 25%-40% east.	West 12 to 22 mph western Colorado, northwest 20 to 30 mph Black Hills area, 5 to 15 mph elsewhere.
NORTHERN CALIFORNIA AREA Clear skies inland, with areas of fog or low clouds along the coast.	60s and 70s near the coast and upper 80s to 104 inland	10-22% driest inland areas.	N to SE 7-17 mph morning winds near the Cascades/Sierra and higher ridges in the western mountains, with local gusts 18-23 mph. Otherwise winds variable 12 mph or less.

<p>SOUTHERN CALIFORNIA AREA Morning low clouds and fog along the lower coastal slopes with local drizzle, otherwise mostly sunny, except a slight chance of thunderstorms over the southern California mountains and deserts east of Cajon Pass and over and east of the Sierra crest.</p>	<p>70-85 mountains and coastal basins, 90s central valley and upper deserts and 100-110 lower deserts.</p>	<p>20-35% mountains and inland valleys 50-70% coastal valleys 10-20% deserts</p>	<p>SW-NW 5-15 mph.</p>
<p>EASTERN GREAT BASIN AREA Partly cloudy in eastern Idaho and Utah, mostly sunny elsewhere.</p>	<p>70 to 85 in the lower elevations and 50 to 75 in the mountains. 89 to 101 in the valleys and 75 to 80 in the mountains to the south.</p>	<p>25 to 40 percent in eastern Idaho and Utah. 10 to 25 percent in western Idaho and Utah. 4 to 15 percent in southern Utah.</p>	<p>Variable at 5 to 15 mph in central and southern Idaho and western Wyoming. West at 5 to 15 mph in Utah.</p>
<p>SOUTHWEST AREA Partly to mostly sunny. Isolated dry thunderstorms over the mountains of eastern AZ and western NM. Scattered wet thunderstorms eastern NM, western TX.</p>	<p>Upper 60s to upper 70s mountains, upper 70s to upper 80s lower elevations, and 90s to near 102 in the AZ deserts.</p>	<p>30-50% eastern NM and west TX, 10-20% elsewhere.</p>	<p>SW to W 10-20 mph and gusty over northern and central AZ and northern and central NM, and generally S to SE 10-15 mph over eastern NM and west TX.</p>

HEAT DISORDERS

Heat becomes a problem when humidity, air temperature, and radiant heat combine with hard work to raise body temperature beyond safe limits. Sweat is your main defense. Everyone on the fireline must understand the importance of drinking water often.

- There are three forms of heat stress.
 - Heat cramps
 - Heat exhaustion
 - Heat stroke

- The mildest is heat cramps. Heat cramps can progress to heat exhaustion and eventually heat stroke.
- Heat cramps are involuntary muscle contractions caused by failure to replace fluids or electrolytes, such as sodium and potassium.
 - Cramps can be relieved with stretching and by replacing fluids and electrolytes.
 - Heat cramps can be prevented by maintaining an adequate intake of water, electrolyte replacement drinks and by eating fresh fruits and vegetables.

- Heat exhaustion is characterized by:
 - Weakness
 - Extreme fatigue
 - Nausea
 - Headaches
 - Wet, clammy skin

- Heat exhaustion is caused by inadequate fluid intake. Treat heat exhaustion by resting in a cool environment and replacing fluids and electrolytes.
- Heat stroke is caused by failure of the body's heat controls. Sweating stops and the body temperature rises.
- Heat stroke is characterized by:
 - Hot, often dry skin
 - Body temperature above 105.8 degrees Fahrenheit
 - Mental confusion
 - Loss of consciousness, convulsions, or even coma

- Heat stroke is a medical emergency. Brain damage and death may result if treatment is delayed. Begin rapid cooling with ice or cold water, fanning the victim to promote evaporation. For rapid cooling, partially submerge the victim's body in cool water. Treat for shock if necessary.
- You can prevent the serious consequences of heat disorders by improving your level of fitness and becoming acclimated to the heat. Maintaining a high level of aerobic fitness is one of the best ways to protect against heat stress. The fit worker has a well-developed circulatory system and increased blood volume. Both are important to regulate body temperature. Fit workers start to sweat sooner, so they work with a lower heart rate and body temperature. They adjust to the heat twice as fast as the unfit worker.
