

**INCIDENT MANAGEMENT SITUATION REPORT  
FRIDAY, MAY 27, 2005 – 0530 MDT  
NATIONAL PREPAREDNESS LEVEL 1**

**CURRENT SITUATION:**

Initial attack activity was light nationally with 58 new fires reported. Two new large fires were reported in the Southwest Area. Very high to extreme fire indices were reported in Alaska, Arizona, and New Mexico.

**SOUTHWEST AREA INCIDENTS / LARGE FIRES:**

VEKOL, Arizona State. This fire is seven miles southwest of Stanfield, AZ in grass. A transition to a type 2 Incident Management team (Philbin) will occur today. Evacuations are in effect for the community of Stanfield. Extreme fire behavior was reported.

MESA CAMINO, Santa Fe National Forest. This fire is six miles southwest of Coyote, NM in ponderosa pine. A Type 2 Incident Management Team (Lineback) is assigned. Fire activity was minimal. Smoldering logs and snags with creeping fire was reported.

VALLE, Santa Fe National Forest. This fire is eight miles west of Los Alamos, NM in mixed conifer. No new information was received.

GREEN, Arizona State. This fire is 15 miles south of Eloy, AZ in grass. Progress is being made with aerial resources.

SHINER, Arizona State. This fire is ten miles west of Kingman, AZ in desert scrub and grass. No new information was reported.

SKUNK, Arizona State. This fire is 20 miles southwest of Globe, AZ in chaparral. No new information was reported.

INCIDENT NAME	ST	UNIT	SIZE	% CTN	EST CTN	TOTL PERS	CRW	ENG	HELI	STRC LOST	\$\$\$ CTD

## SOUTHERN AREA INCIDENTS / LARGE FIRES:

BUFFALO TRAIL SCOUT CAMP, Texas Forest Service. This fire is ten miles north of Alpine, TX in pinyon pine, cedar, and juniper. No new information was received.

MITRE PEAK-KING MTN., Texas Forest Service. This fire is ten miles northwest of Alpine, TX in brush, oak and grass. Increased humidity and cooler temperatures mediated fire behavior.

INCIDENT NAME	ST	UNIT	SIZE	% CTN	EST CTN	TOTL PERS	CRW	ENG	HELI	STRC LOST	\$\$\$ CTD
BUFFALO TRAIL SCOUT CAMP	TX	TXS	1,625	50	5/29	19	0	0	2	0	NR
MITRE PEAK-KING MTN.	TX	TXS	3,200	85	UNK	83	2	7	0	0	NR

## OUTLOOK:

**Weather Discussion...** Warm and dry high pressure will continue today over much of the West. In the Southwest, partly cloudy conditions will prevail with a chance for dry thunderstorms along the Mogollon Rim and the Continental Divide. Scattered wet storms are possible east of the Divide.

Geographic Area Weather	High Temperatures	Minimum Relative Humidity	Wind
<b>Southwest</b>  Partly cloudy and not as hot in AZ, with widely scattered thunderstorms, some dry. Partly to mostly cloudy with scattered thunderstorms in NM and west TX.	50s to 70s mountains, eastern NM and west TX. 80s to near 100 lower elevations AZ & NM.	5 to 25% AZ and western NM 25 to 40%+ eastern NM and west TX.	W to SW 5 to 15 mph with gusts to 20 to 25 mph AZ and western NM. S to SE 10 to 20 mph eastern NM and west TX.
<b>Southern California</b>  Areas of morning low clouds and fog in coastal basins. Isolated thunderstorms Sierra Crest and eastward, otherwise sunny.	70 to 85 mountains. 80 to 90 valleys. 90 to 100 upper deserts. 100 to 110 lower deserts.	10 to 25%.	Southwest to northwest 5 to 15 mph.

## SERIOUS INJURY PROCEDURES

Dealing with serious injuries on the fireline can add even more stress to our hectic work environment. In the event a fireline accident occurs, adherence to the following principles is important to insure an adequate and appropriate response is made.

- Before entering the scene, determine whether it is safe to approach. Look for hazards as well as what may have happened. It may be necessary to move the patient or to make the area safe before doing an assessment.
- Provide first aid and assess the extent of the injuries.
- Make contact with your supervisor. Depending on the complexity of the fire, that could be your crew boss, the Division Supervisor, the IC, or even dispatch. If your fire has a medical plan, follow the plan.
- Provide them with accurate, concise information on the following
  - Number of people injured
  - Type of injuries
  - Severity of injuries (light, moderate, severe, life threatening)
  - Mechanism of injury
  - Vital signs (pulse, respirations, level of consciousness, etc)
- Determine the best method of evacuation. Depending on the severity of injury or availability of resources, this decision may already be made for you.
- Keep the radio frequency clear of non-emergency traffic, provide updates of the patients condition and await instructions.
- If evacuation is by helicopter, it may be necessary to construct a helispot. Document treatment provided in case it is necessary to send the information along with the patient in the aircraft.
- If the patient need to be carried to a road, insure enough people are available to work in relays.
- Once the patient is clear, take a moment to write down witness statements, clean up notes and timelines, and document any other pertinent information.
