

**INCIDENT MANAGEMENT SITUATION REPORT
TUESDAY, JUNE 7, 2005 – 0530 MDT
NATIONAL PREPAREDNESS LEVEL 1**

CURRENT SITUATION:

Initial attack activity was light nationally with 76 new fires reported. One new large fire was reported in the Southern California Area. Five large fires were contained, two in the Eastern Great Basin Area, and one each in the Western Great Basin, Northern California, and Southern Areas. Very high to extreme fire indices were reported in Alaska, Arizona, New Mexico, Utah, and Kansas.

WESTERN GREAT BASIN AREA INCIDENTS / LARGE FIRES:

AIR FORCE, Las Vegas Field Office, Bureau of Land Management. A Type 2 Incident Management Team (Brunner) is assigned. This fire is at Nellis Air Force Base, NV in grass. Wildlife habitat, cultural sites, and Department of Defense assets are threatened. Extreme fire behavior and high rates of spread are impeding containment efforts.

INCIDENT NAME	ST	UNIT	SIZE	% CTN	EST CTN	TOTL PERS	CRW	ENG	HELI	STRC LOST	\$\$\$ CTD

SUMMIT	NV	ELD	6,650	100	---	130	5	4	0	0	300K

SOUTHERN CALIFORNIA AREA INCIDENTS / LARGE FIRES:

DULCE, San Bernardino County Fire Department. This fire is four miles southeast of Yucca Valley, CA in grass and brush. Poor access, gusty winds and flashy fuels are hampering containment efforts.

INCIDENT NAME	ST	UNIT	SIZE	% CTN	EST CTN	TOTL PERS	CRW	ENG	HELI	STRC LOST	\$\$\$ CTD
DULCE	CA	BDC	480	15	6/7	169	2	38	6	0	NR

EASTERN GREAT BASIN AREA INCIDENTS / LARGE FIRES:

RED CLIFFS, Cedar City Field Office, Bureau of Land Management. This fire is nine miles north of St. George, UT in grass. Good progress towards containment were reported. No further information was received.

INCIDENT NAME	ST	UNIT	SIZE	% CTN	EST CTN	TOTL PERS	CRW	ENG	HELI	STRC LOST	\$\$\$ CTD

OUTLOOK:

Fire Weather Watch: In effect for most of northern and northeastern New Mexico below 8,500 feet for strong winds and low humidity values.

Weather Discussion: A deep trough of low pressure will continue to spin along the Pacific Northwest coast bringing unsettled weather to the northwest and northern Rockies while winds further south over the Great Basin begin to die down under dry and more stable conditions. In Alaska, a weak ridge of high pressure aloft across the interior will limit isolated convection to areas near a surface trough of low pressure stretched across the interior. Low pressure in the eastern Aleutians will bring a southeasterly flow to much of southern Alaska leading to an increase in moisture.

Geographic Area Weather	High Temperatures	Minimum Relative Humidity	Wind
Western Great Basin Partly sunny across the north with isolated showers and thunderstorms in the far north. Mostly sunny and breezy across the south.	55 to 72 north valleys 75 to 90 south valleys 50 to 65 mountains	20 to 40% north valleys: 7 to 20% south valleys: 17 to 50% mountains:	West to northwest at 5 to 15 mph with localized gusts to 25 mph.
Northern California Showers and isolated thunderstorms, mainly throughout the mountains of the northern 2/3s of northern California.	50s and 60s mountains and coast. Mid 70s inland valleys.	25 to 40% inland valleys. Above 50% elsewhere	SW to NW 5 to 15 mph with local gusts to 27 mph
Southwest Breezy to windy, otherwise mostly sunny and dry.	60 to 80 mountains. 80 to 95 lower elevations.	10 to 15% across many areas. Mountain and western TX. 15 to 30%	SW 15 to 30 mph northern NM. SW 10 to 25 mph all of AZ; SW 10 to 25 mph rest of NM. S to SE at 10 to 20 mph western TX.
Southern California Morning, low clouds and fog in coastal basins and lower coastal mountain slopes, otherwise mostly sunny.	65 to 75 mountains. 70 to 82 valleys. 80 to 85 upper deserts. 90 to 100 lower deserts.	20 to 35%.	Southwest to northwest 10 to 20 mph.

HYDRATION

Studies conducted on wildland firefighters indicate that fire suppression activities generate about 7.5 kilocalories of heat each minute worked, or 450 kilocalories for each hour. Additional heat (about 180 kilocalories per hour) comes from the environment and the fire. The total heat load amounts to 580 kilocalories per hour ($400 + 180 = 580$). Complete evaporation of 1 liter of sweat removes 580 kilocalories of heat. In order to maintain a healthy body temperature, the firefighter needs to evaporate about 1 liter (slightly more than 1 quart) of sweat during each hour of work.

- Maintaining body fluids is essential for sweating. You must hydrate before, during, and after work.
- Before work you should take extra fluids to prepare for the heat. Drink 1 or 2 cups of water, juice, or a sport drink before work. Avoid excess caffeine; it hastens fluid loss in the urine.
- While working drink at least 1 quart of fluid per hour. Drink as much as you can during the lunch break. Water is your greatest need during work in the heat.
- Providing a portion of fluid replacement with a carbohydrate/electrolyte sport beverage will help you retain fluids and maintain energy and electrolyte levels.
- After work it is important to continue drinking to replace fluid losses. Thirst always underestimates fluid needs, so you should drink more than you think you need.
- Rehydration is enhanced when fluids contain sodium and potassium, or when foods with these electrolytes are consumed along with the fluid.
- Unacclimatized workers lose more salt in the heat so they need to pay particular attention to salt replacement. Don't overdo salt intake; too much salt impairs temperature regulation. Excessive salt can cause stomach distress, fatigue, and other problems.
- Make potassium-rich foods like bananas and citrus fruits a regular part of your diet, and drink lots of lemonade, orange juice, or tomato juice.
- Limit the amount of caffeine drinks such as coffee and colas because caffeine increases fluid loss. Avoid alcoholic drinks. They also cause dehydration.
- You can assess your hydration by observing the volume, color, and concentration of your urine. Low volumes of dark, concentrated urine, or painful urination indicate a serious need for rehydration. Other signs of dehydration include a rapid heart rate, weakness, excessive fatigue, and dizziness.
- Rapid loss of several pounds of body weight is a certain sign of dehydration. Rehydrate before returning to work; continuing to work in a dehydrated state can lead to serious consequences, including heat stroke, muscle breakdown, and kidney failure.
