

**INCIDENT MANAGEMENT SITUATION REPORT**  
**FRIDAY, NOVEMBER 25, 2005 – 1000 MST**  
**NATIONAL PREPAREDNESS LEVEL 1**

**CURRENT SITUATION:**

Initial attack activity was moderate nationally with 533 new fires reported for the week. Twenty Three new large fires were reported, 18 in the Southern Area, two in the Eastern Area, two in the Southwest Area, and one in the Southern California Area. Thirteen large fires were contained, 12 in the Southern Area and one in the Southern California Area. Very high to extreme fire indices were reported in California, Nevada, Nebraska, Kansas, Illinois and South Dakota.

Presidential Disaster Declarations have been issued for Hurricanes Katrina, Rita and Wilma in Mississippi, Alabama, Louisiana, Texas and Florida.

A link to a map with resources mobilized for hurricane response is located at [http://gacc.nifc.gov/sacc/predictive/intelligence/Resource\\_Map.pdf](http://gacc.nifc.gov/sacc/predictive/intelligence/Resource_Map.pdf).

**SOUTHERN AREA INCIDENTS/LARGE FIRES:**

HURRICANE KATRINA/SUPPORT, Federal Emergency Management Agency. Emergency Support Functions (ESF) #4 in Mississippi and Louisiana are staffed.

A Type 2 Incident Management Team (Blume) is assigned. The Team is managing a base camp at the Naval Construction Battalion Center in Gulfport, MS.

HURRICANE RITA SUPPORT, Federal Emergency Management Agency.

A Type 1 Incident Management Team (Dietrich) is assigned. The Team is operating under a unified command with the Cameron Parish Sheriffs Department, State agencies and other federal agencies. They are assisting with planning and debris removal.

ENTRANCE ROAD, Brazoria Wildlife Refuge. This fire is near the entrance to the Brazoria National Wildlife Refuge in Brazoria County, TX in tall grass. The fire is being monitored.

SIMPSON TIGER, Okmuglee Field Office, Bureau of Indian Affairs. This fire is 3 miles south of Dustin, OK in grass and timber. No further information was reported.

SONNY GILES, Oklahoma Division of Forestry. This fire is 12 miles northeast of Sallisaw, OK in hardwood litter. Active fire behavior was reported.

NORTH CANADIAN, Okmuglee Field Office, Bureau of Indian Affairs. This fire is 5 miles north of Dustin, Ok in grass and hardwoods. An oil well has been evacuated. No further information was reported.

HEYBURN, Okmuglee Field Office, Bureau of Indian Affairs. This fire is 7 miles northeast of Brisco, OK in timber and grass. No further information was reported.

SAWNEY CREEK, Oklahoma Division of Forestry. This fire is ten miles southeast of Stillwell, OK in timber. Active fire behavior was reported.

## SOUTHWEST AREA INCIDENTS/LARGE FIRES:

MYSTERY FIRE, Gila National Forest. This fire is 25 miles south of Reserve, NM in timber and grass understory. No further information was received.

PROMONTORY, Tonto National Forest. This fire is two miles north of Christopher Creek, AZ timber, slash and chaparral. Good progress was made on constructing handline and burnout operations were completed along the east and western flanks. Low intensity backing fire with occasional torching and short range spotting were reported.

## OUTLOOK:

**Weather Discussion:** Through the weekend, an upper low pressure system will move into the West and the strong low over Northeast will begin to exit. Dry weather will continue over much of the Southern Area through Friday; a change in the weather pattern will bring precipitation starting Saturday through much of next week. Southern California will see onshore flow through Saturday, then a return of dry, gusty Santa Ana winds Saturday night and Sunday.

Geographic Area Weather	High Temperatures	Minimum Relative Humidity	Wind
Partly cloudy.	60 to 75 mountains. 75 to 85 valleys. 65 to 75 upper deserts. 80 to 90 lower deserts.	10 to 20%.	Northwest to northeast 5 to 15 mph.

## FIRE SHELTER DEPLOYMENT

Firefighters must never rely on fire shelters, but instead should depend on well-defined and pre-located escape routes and safety zones. However, if the need for shelter deployment should ever arise, it is imperative that the firefighter knows how to deploy and use the shelter.

- Don't think of your fire shelter as a tactical tool.
- Recognize when deployment is your only option. When considering escape, remember that you can hold your breath for only about 15 seconds while running through flames or superheated air.
- If time runs out while attempting to escape, get on the ground before the flame front arrives and finish deploying on the ground. Death is almost certain if the fire catches a person off the ground. (The optimal survival zone with or without a shelter is within a foot of the ground.) Once entrapped, the highest priority is to protect the lungs and airways.
- When deploying, remove packs and place them away from the deployment area.
- Most burnovers occur during initial attack or extended initial attack. However, burnovers have occurred when crews or individuals initiated action without direction from an Incident Management Team, adequate communication, or knowledge of current fire weather.
- Escaped fires often overwhelm initial attack resources. Many wildland fire fatalities can be directly attributed to failure to follow basic wildland fire strategy and tactics—10 Standard Fire Orders, 18 Watchout Situations, and the Downhill Checklist. Use personal protective equipment.
- Even though deploying your shelter is a last resort, time is critical when entrapped. Play it safe; give yourself ample time to deploy. Failure to adequately anticipate the severity and timing of the burnover and failure to utilize the best location and proper deployment techniques contributed to the fatalities and injuries on the Thirtymile incident. Don't let the cost of opening a shelter become a factor in your decision. If the shelter isn't needed, carefully refold it and put it back in its case until you can get a new one. Save the opened shelter for training.
- Before passing through superheated gases, try to close the front of your shroud. You can take your shelter out of the plastic bag and use it for a heat shield to pass quickly through a hot area. If you use the shelter in this way, don't drop it or allow it to snag on brush. Remember that your lungs are still vulnerable.
- If flames contact the shelter, the glass/foil fabric heats up more rapidly. If flame contact is prolonged, spots of aluminum foil can melt or tear away, reducing protection. Even if this happens, it is still safer inside the shelter. Your flame-resistant clothing becomes your backup protection. It's even more critical to keep your nose pressed to the ground and stay in your shelter.
- Remember, direct contact with flames or hot gases is the biggest threat to your shelter. It is vital to deploy in a spot that offers the least chance of such contact. The heavier the fuels, the bigger your fuel break needs to be.
- Remember, once you commit yourself to the shelter, stay there. No matter how bad it gets inside, it is usually much worse outside. If you panic and leave the shelter, one breath of hot, toxic gases could damage your lungs. Suffocation may follow. Most firefighters were killed as a result of heat-damaged airways and lungs, not by external burns. Protect your airways and lungs at all costs by keeping your face close to the ground and staying in your shelter.
