

**National Interagency Coordination Center
Incident Management Situation Report
Friday, January 11, 2008 – 1000 MST
National Preparedness Level 1**

National Fire Activity (Weekly Total)

Initial attack activity: Light (474 new fires)
 New large fires: 15 (*)
 Large fires contained: 10
 Uncontained large fires: 5
 Area Command Teams committed: 0
 NIMOs committed: 0
 Type 1 IMTs committed: 0
 Type 2 IMTs committed: 0
 Fire Use Teams committed: 0

** Uncontained large fires do not include WFU or confine/contain incidents. **

Southern Area (PL 2)

New fires: 467
 New large fires: 13
 Uncontained large fires: 5

Rosita Cut-Off, Texas Forest Service. Five miles south of Rosita, TX. Tall grass. Wind driven fire.

South Peoria, Miami Agency, BIA. One mile south of Peoria, OK. Hardwood litter. No new information. Last report unless new information is received.

Hulah Lake, Osage Agency, BIA. One mile southwest of Hulah, OK. Grass and leaf litter. No new information. Last report unless new information is received.

Beaver Run, Miami Agency, BIA. Four miles northeast of Peoria, OK. Slash, grass, and leaf litter. No new information. Last report unless new information is received.

No Way, Miami Agency, BIA. Five miles east of Quapaw, OK. Logging slash, grass and leaf litter. No new information. Last report unless new information is received.

Predictive Services Discussion: Another storm system will move across the Southeast today bringing precipitation, followed by another system over Florida on Sunday. Southern California will see gusty east winds Sunday and Monday. Winds will increase once again over the southern Plains by early to mid next week.

SAFETY ZONES

A safety zone is a location where the threatened firefighter can find adequate refuge from an approaching fire.

- What is the difference between a safety zone and a deployment site?
 - The safety zone is the area where a firefighter can survive without using a fire shelter. The deployment site is used when fire conditions are such that escape routes and safety zones have been compromised.

- How do you identify a good safety zone?
 - Consider the distance from the escaped fire as well as topography, winds, fire behavior, and fuels in the area.
 - The best locations are usually “in the black;” those with a minimum of, or devoid of, ground/aerial vegetation; or large bodies of water.
 - Size is sufficient for all present resources with a minimum distance from fire of at least four times the maximum flame length.
 - Location is scouted and marked well for visibility at all times.
 - Location has been reassessed in relation to line work progress, fatigue, changes in fire behavior, and arrival of additional resources
