Incident Management Situation Report
Tuesday, April 7, 2009 – 0800 MDT
National Preparedness Level 1**

National Fire Activity

Initial attack activity:	Light (163 new fires)
New large fires:	6 (*)
Large fires contained:	10
Uncontained large fires:	12
Area Command Teams committed:	0
NIMOs committed:	0
Type 1 IMTs committed:	0
Type 2 IMTs committed:	1

Southern Area (PL 2)

New fires:	163
New large fires:	6
Uncontained large fires:	12
Type 2 IMTs committed:	1

2009 Winter Initial Attack, Texas Forest Service. Texas IMT 2 (Hannemann). IMT is supporting multiple fires in west Texas. Acres reported are a cumulative total.

Magic City, Texas Forest Service. Eight miles southwest of Wheeler, TX. Grass. Active fire behavior.

Two Bush Road, Texas Forest Service. Started on private land four miles south of Joplin, TX. Brush and grass. Interior smoldering.

864, Texas Forest Service. Started on private land 17 miles northeast of Sonora, TX. Brush and grass. Interior smoldering.

Jeter II, Texas Forest Service. Started on private land three miles west of Albany, TX. Brush and grass. Interior smoldering.

Cutover, Texas Forest Service. Sixteen miles southeast of Woodville, TX. Timber. Active fire behavior.

23rd Street, Florida DOF. Fifteen miles west of Miami, FL. Timber litter. Active fire behavior. Numerous residences threatened.

El Coyote Ranch, Texas Forest Service. Started on private land 23 miles south of Falfurrias, TX. Brush and grass. Moderate fire activity.

Black Canyon, Texas Forest Service. Started on private land 15 miles north of Alpine, TX. Grass. Creeping.

Siebenicher, Texas Forest Service. Started on private land 14 miles south of Fredericksburg, TX. Grass. Minimal fire activity.

West Half Bank Fire, Oklahoma DOF. Four miles northwest of Lane, OK. Logging slash and hardwood litter. No further information received.

Poor Mountain, Virginia DOF. One mile northeast of Elliston, VA. Timber. No further information received.

Predictive Services Discussion: An offshore low pressure system will begin to move onto the California coast today producing dry and windy conditions for southeastern California, southern Nevada and western Arizona. A weak surface low pressure system over eastern New Mexico, western Oklahoma, and west Texas will develop dry and windy conditions. Cool, dry, and windy conditions will move across the Southeast behind a strong storm system.

Falling Snags

Falling snags (dead, standing trees without leaves or needles in the crowns) present a significant hazard to wildland firefighters. Snags typically have much lower fuel moistures than live, green trees; and they burn more readily. In the process, they often throw spot fires far in advance of the main fire and often burn through more quickly than green trees, falling with little or no warning.

- The risk of injuries from falling snags increases during the night operational period when visibility is greatly reduced.
- While the cooler, nighttime period is generally a more effective time to gain control of wildfires, the increased risk from unseen falling snags may limit the widespread use of crews at night in areas of dead and dying timber.
- Environmental conditions that increase risk from falling snags:
 - Strong winds
 - Night operations
 - Steep slopes
 - Diseased or bug-killed areas
- Things to consider when assessing the potential hazards of both snags and green trees:
 - Trees have been burning for an extended period.
 - High-risk tree species (those that are known for rot and shallow root systems) are in the area.
 - Numerous downed trees
 - Dead or broken tips and limbs overhead
 - Accumulation of downed limbs
 - Absence of needles, bark or limbs
 - Leaning or hung-up trees
- Mitigation measures to take:
 - Identify and flag all high-risk snags and green trees.
 - Keep personnel out of the high-risk areas until the hazard has been removed.
 - Establish lookouts.
