

**National Interagency Coordination Center
Incident Management Situation Report
Friday, August 7, 2009 – 0530 MDT
National Preparedness Level 3**

National Fire Activity

Initial attack activity:	Heavy (329 new fires)
New large fires:	12 (*)
Large fires contained:	3
Uncontained large fires : **	39
Area Command Teams committed:	0
NIMOs committed:	0
Type 1 IMTs committed:	2
Type 2 IMTs committed:	15

Nationally, there are 86 large fires being managed with minimal or no resource commitment that are not shown on today's report.

** Uncontained large fires do not include confine/contain and resource benefit incidents. **

[Link](#) to Geographic Area daily reports.

A Type 1 Incident Management Team (Molumby) has been mobilized to the Haig Camp Complex near Hope, British Columbia, Canada.

Northwest Area (PL 3)

New fires:	39
New large fires:	1
Uncontained large fires:	8
Type 2 IMTs committed:	7

Williams Creek, Umpqua NF. IMT2 (Paul). Fifteen miles east of Glide, OR. Timber. Smoldering and creeping. Structures threatened. Power transmission lines and anadromous fisheries threatened. Hwy 138 has been closed. Communities of Steamboat Inn and Moore Hills Lane have been evacuated.

Discovery, Okanogan/Wenatchee NF. Washington IMT2 (Gormley). Timber. Thirty miles west of Yakima, WA. Moderate fire activity with torching. Structures threatened.

Tiller Complex, Umpqua NF. IMT2 (Ensley). Six miles northeast of Tiller, OR. Timber. Creeping.

North Fork Complex (2 fires), Umatilla NF. IMT2 (Batten). Fifteen miles southeast of Ukiah, Oregon. Timber, brush and grass. Creeping and smoldering. Precipitation occurred over the fire area yesterday. Reduction in acreage due to more accurate mapping.

Heatwave Complex (4 fires), Olympic National Park, NPS. IMT2 (McBratney). Confine/contain management strategy. Fifteen miles west of Brinnon, WA. Timber with heavy dead and down fuels. Smoldering.

Langille, Gifford-Pinchot NF. Transfer of command from IMT2 (Hutton) back to the local unit will occur today. Confine/contain management strategy. Fifteen miles southwest of Randle, WA. Timber. Creeping and smoldering.

Cougar Ridge Complex, Wallowa-Whitman NF. IMT2 (Rapp). Twelve miles south of Wallowa, OR. Timber. Smoldering and creeping. Precipitation occurred over the fire area yesterday.

Box Canyon, Warm Springs Agency, BIA. Ten miles southeast of Warm Springs, OR. Pine, juniper brush and grass. No further information received.

Long Prong, Wallowa-Whitman NF. Thirty-five miles northeast of Enterprise, OR. Timber and grass. No new information.

* **Panther Complex** (2 fires), North Cascades National Park, NPS. Incident is being managed for resource benefit objectives. Includes previously reported Panther Creek incident. Twenty-one miles east of Marblemount, WA. Timber with heavy down fuels. Isolated and group tree torching. Last report unless significant activity occurs.

Gold Hill Complex, Mt. Baker-Snoqualmie NF. Confine/contain management strategy. Three miles southeast of Darrington, WA. Timber. No new information. Last report unless significant activity occurs.

Predictive Services Discussion: Strong gusty winds will continue today across the southern Great Basin, Arizona, western Colorado and Wyoming. Winds will also increase across the Northwest. Cooler conditions and higher relative humidity will continue to move into the northwest quarter of the country with thunderstorms shifting east. Hot and dry conditions will persist across the interior of Alaska.

Falling Snags

Falling snags (dead, standing trees without leaves or needles in the crowns) present a significant hazard to wildland firefighters. Snags typically have much lower fuel moistures than live, green trees; and they burn more readily. In the process, they often throw spot fires far in advance of the main fire and often burn through more quickly than green trees, falling with little or no warning.

- The risk of injuries from falling snags increases during the night operational period when visibility is greatly reduced.
- While the cooler, nighttime period is generally a more effective time to gain control of wildfires, the increased risk from unseen falling snags may limit the widespread use of crews at night in areas of dead and dying timber.
- Environmental conditions that increase risk from falling snags:
 - Strong winds
 - Night operations
 - Steep slopes
 - Diseased or bug-killed areas
- Things to consider when assessing the potential hazards of both snags and green trees:
 - Trees have been burning for an extended period.
 - High-risk tree species (those that are known for rot and shallow root systems) are in the area.
 - Numerous downed trees
 - Dead or broken tips and limbs overhead
 - Accumulation of downed limbs
 - Absence of needles, bark or limbs
 - Leaning or hung-up trees
- Mitigation measures to take:
 - Identify and flag all high-risk snags and green trees.
 - Keep personnel out of the high-risk areas until the hazard has been removed.
 - Establish lookouts.
