

**National Interagency Coordination Center
Incident Management Situation Report
Monday, October 12, 2009 – 0530 MDT
National Preparedness Level 1**

National Fire Activity

Initial attack activity: Light (22 new fires)
 New large fires: 1 (*)
 Large fires contained: 1
 Uncontained large fires : ** 5
 Area Command Teams committed: 0
 NIMOs committed: 0
 Type 1 IMTs committed: 0
 Type 2 IMTs committed: 1

Nationally, there are 60 large fires being managed with minimal or no resource commitment that are not shown on today's report.

** Uncontained large fires do not include confine/contain and resource benefit incidents.

Northern California Area (PL 2)

New fires: 12
 New large fires: 0
 Uncontained large fires: 2
 Type 2 IMTs committed: 1

Mill Creek #4, Hoopa Valley Tribe. IMT2 (Swarzlander). Seven miles northeast of Hoopa, CA. Timber. Moderate fire activity with spotting. Road closures in effect. Smoke impacting the communities of Hoopa and Orleans.

Wilson, Humboldt-Del Norte Unit, Cal Fire. Seven miles north of Klamath, CA. Timber. Moderate fire activity.

TFD – Twin Falls District, BLM

Predictive Services Discussion: Pacific high pressure is being propelled eastward over the west coast states as low pressure over Canada combines with the remains of Typhoon Melor to form one ominous low pressure system off the coast of British Columbia. Its extensive frontal system will stretch far south along the Pacific coast and will be the first large west coast storm of the fall season. The resulting southwest flow aloft will begin to drive moisture into much of the west coast today, with increasing clouds and winds, and some light rain beginning in coastal areas and progressing inland later tonight. The brunt of this system will be felt in northern and central California, with the heaviest rain arriving on Tuesday. Little rain is expected south of Los Angeles County, and inland portions of the Southwest will also remain quite dry.

[Link](#) to Predictive Services Outlook products.

Today's discussion is from the
Hazard Tree Category.

Hazard Trees – Situational Awareness

Snags (dead, standing trees without leaves or needles in the crowns) and green hazard trees present a significant threat to wildland firefighter safety. Snags typically have much lower fuel moistures than live, green trees; and they burn more readily. In the process, they often throw off embers creating spot fires in advance of the main fire. Snags may burn through more quickly than green trees and can fall without warning. Live, green trees weakened by insects, disease, weather, fire, and age presents another hazard and they can also fall without notice.

- The risk of serious injuries from hazard trees may increase during the night operational period when visibility is reduced.
- While work in cooler, nighttime environments can help control efforts, it also presents an increased risk from unseen falling snags and weakened live trees. Night operations should be restricted in areas of high risk rated dead and dying trees.
- Environmental conditions that increase risk from hazard trees: Strong or gusty winds from storm cells. Air operations - water or retardant drops, rotor wash from helicopters. Steep slopes with rolling material. Erosion and undercut root systems. Diseased or bug-killed areas (Mountain Pine Beetle).
- Things to consider when assessing the potential dangers of hazard trees: Trees have been burning for an extended period. High-risk tree species (those that are known for rot and shallow root systems) in the area. Numerous downed trees/material. Broken tops and dead limbs overhead. Accumulation of downed limbs, tree decay, cavities, splits, cracks, lack of needles, bark, limbs or other indicators of overhead hazards. Roots damaged by equipment, fire or erosion create hazards.
- Mitigation measures to take: Identify and establish No-Work-Zones (NWZ) in all high-risk areas until the hazard has been mitigated. Instruct firefighters of established NWZ in briefings. Identify with flagging/signs, and show area on maps. Establish lookouts to protect NWZs. Assign only qualified sawyers and Falling Bosses. Order additional professional fallers in advance. Use heavy equipment, and blasters when appropriate. Plan a quick and safe escape routes. Do not turn your back on a falling tree or known hazard. Use lookouts to maintain secure felling areas. Maintain situational awareness.
