

**National Interagency Coordination Center
Incident Management Situation Report
Monday, June 7, 2010 – 0530 MT
National Preparedness Level 2**

National Fire Activity

Initial attack activity:	Light (50 new fires)
New large fires:	2 (*)
Large fires contained:	1
Uncontained large fires: **	11
Area Command Teams committed:	0
NIMOs committed:	0
Type 1 IMTs committed:	1
Type 2 IMTs committed:	2

Nationally, there are 28 large fires being managed to achieve multiple objectives.

** Uncontained large fires includes only fires being managed under a full suppression strategy.**

[Link](#) to Geographic Area daily reports.

Department of Interior personnel are assigned to several locations in the Gulf of Mexico to assess and mitigate impacts resulting from the Deepwater Horizon oil spill.

- A total of 358 Fish and Wildlife Service personnel are assigned to Delta, Breton and Bon Secour National Wildlife Refuges, as well as Houma, LA and Mobile, AL.
- A total of 297 National Park Service personnel are assigned to Gulf Islands National Seashore, Jean Lafitte Park and Preserve, Everglades National Park, Dry Tortugas, Biscayne National Park, De Soto National Memorial and Big Cypress National Preserve.

Alaska Area (PL 4)

New fires:	4
New large fires:	1
Uncontained large fires:	7
Type 2 IMTs committed:	2

Eagle Trail, Tok Area Forestry, Alaska DOF. IMT 2 (Allen). One mile south of Tanacross, AK. Spruce. Creeping and smoldering with isolated torching. Traffic delays along the Alaska Highway. Numerous structures threatened.

* **Delta Complex** (4 fires), Delta Area Forestry, Alaska DOF. IMT2 (Paul). Includes previously reported Gilles Creek incident. Twenty miles north of Delta, AK. Spruce. Creeping and smoldering in deep duff.

Applegate, Tanana Zone, BLM. Limited perimeter control incident. Started on state land 25 miles northeast of Manley Hot Springs, AK. Black spruce, brush and grass. Creeping and smoldering. Numerous structures threatened.

Toklat 2, Tanana Zone, BLM. Limited perimeter control incident. Started on state land 25 miles southwest of Nenana, AK. Black spruce and tundra. Creeping and smoldering. Precipitation occurred over the fire area yesterday. Numerous structures threatened.

Eklutna, Mat-Su Area, Alaska DOF. Thirty-seven miles northeast of Anchorage, AK. Timber and grass. Creeping and smoldering.

Christian River, Upper Yukon Zone, BLM. Fifty-six miles north of Fort Yukon, AK. Spruce and timber litter. Reduction in acreage due to more accurate mapping. No further information received.

Predictive Services Discussion: Significant fire potential today over the Southwest due to combination of very hot and dry weather along with a dry few thunderstorms over western New Mexico and far eastern Arizona. Isolated wet thunderstorms are on tap for eastern New Mexico. Southern California will also be a little cooler today with gusty winds over the mountains and deserts. The Alaska Interior will begin a warming and drying trend with decreasing shower and thunderstorm activity.

[Link](#) to Predictive Services Outlook products.

Today's discussion is from the Fireline Safety Category.

Hazard Trees

Snags (dead, standing trees without leaves or needles in the crowns) and other hazard trees present a significant hazard to wildland firefighters. Snags typically have much lower fuel moistures than live, green trees; and they burn more readily. In the process, they often throw fire brands far in advance of the main fire and often burn through more quickly than green trees, falling with little or no warning. Live, green trees have been weakened by insects, disease, weather, past fires, and age present equal hazard and can fall without warning.

- The risk of injuries from hazard trees increases during the night operational period when visibility is greatly reduced.
- While the cooler, nighttime period is generally a more effective time to gain control of wildfires, the increased risk from unseen falling snags and weakened live trees may limit the widespread use of crews at night in areas of dead and dying timber.
- Environmental conditions that increase risk from hazard trees: Strong winds or erratic winds from storm cells. Night operations. Air operations - cargo drops, water or retardant drops, helicopter take off/landing, low-level flights. Steep slopes. Diseased or bug-killed areas.
- Things to consider when assessing the potential dangers of hazard trees: Trees have been burning for an extended period. High-risk tree species (those that are known for rot and shallow root systems) are in the area. Numerous downed trees. Dead or broken tips and limbs overhead. Accumulation of downed limbs. Tree decay, cavities, splits, cracks. Absence of needles, bark or limbs. Leaning or hung-up trees. Roots damaged by equipment or erosion.
- Mitigation measures to take: Identify and flag all high-risk areas until the hazard has been removed. Keep personnel out of the high-risk areas until the hazard has been removed. Use saw teams and falling bosses. Establish lookouts. Plan a quick and safe escape route. Do not turn your back on a falling tree. Maintain situational awareness.
