**Predictive Services Discussion: Significant fire potential is expected in the Southwest, the Sacramento Valley, and San Francisco Bay Area today due to strong winds and low humidity.** Windy and dry conditions will continue today across the Southwest, with greatest fire potential across New Mexico and portions of west Texas. Gusty northeast winds will continue today across the Sacramento Valley and foothills and across the San Francisco Bay area with increased fire potential mainly across the lower elevations. Alaska will continue to see moderating fire potential across the south with cool and moist conditions.

**Today's discussion is from the  
Fireline Safety Category.**

## **NO COMMUNICATION LINK WITH CREW MEMBERS, SUPERVISORS & ADJOINING FORCES**

Watchout Situation #7 is a danger that must be mitigated by maintaining good communications while working on fires. Firefighters must constantly ask themselves the following questions as situations change on the fireline:

- Can communications be established?
  - Talk about how communications are set up on fires.
  - Review situations where communications were a problem and what was done to fix the problem.
  - Do you need a repeater setup or can an experienced firefighter act as a human repeater?
  
- Is the communication triangle complete?
  - Review the communication triangle and where it comes up in the "10 Standard Fire Orders" and the "18 Watchout Situations."
  - Discuss ways that firefighters can maintain the communication triangle on the fireline.
  
- Reduce the risks
  - If the situation is complex, wait until communications are in place.
  - Talk about the fires where crews had to leave the line, didn't go out on the line, or something negative happened because communications were inadequate. Discuss what was done to establish communications.
