**Predictive Services Discussion:** Winds will decrease today across the Southwest. Relative humidity will increase over the eastern half of New Mexico with mostly wet thunderstorms possible. An approaching low pressure trough into the Northwest will begin to increase wind across the Northwest and Northern California.

**Today's discussion is from the  
Fireline Safety Category.**

**ON A HILLSIDE WHERE ROLLING MATERIAL CAN IGNITE FUEL BELOW**

When firefighters find themselves in Watchout Situation #13, they must answer the following questions:

- Can you locate/construct a line to prevent material from rolling below? What do you call line that catches rolling material? Describe how you would construct this type of line and what factors you would have to consider (e.g., slope, fuels, etc.)
- Will you get enough warning of rolling material to prevent being hit by it? Who needs to be watching for rolling material? What kinds of warning systems could you establish?
- Can you see where any material that rolls below you goes and what it does? What can happen when material rolls out of the fire and below you out of view? What needs to be done to mitigate this danger?
- Is the area free of large amounts of flashy fuels? Review the Common Denominators of Tragedy Fires.
- Is the area free of chimneys, gullies, and steep slopes? Review the Common Denominators of Tragedy Fires.
- Do you have two escape routes so you can go either way? Talk about where your most likely escape routes and safety zones will be when you are on a hillside where rolling material can ignite fuel below.
- To reduce the risks:
  - Post lookouts.
  - Consider locating line in a defensible position. Talk about steep fires where you have had material rolling out below you and how you dealt with it.
