**Predictive Services Discussion:** Warming and drying will continue today across most of the West. Offshore flow will prevail across the Northwest and California. Wet thunderstorms should be confined to the Four Corner states.

Today's discussion is from the  
LCES (Lookouts, Communication, Escape  
Routes, and Safety Zones) Category.

## ESCAPE ROUTES

An escape route is a preplanned and understood route to reach a safety zone.

- What are the primary concerns in choosing an escape route?
  - - Select the closest, least obstructed route.
    - Plan for more than one escape route.
    - Avoid an uphill escape.
    - Scout and clearly mark the route for visibility (aids during smoky situations or night operational periods). NWCG recommends using hot-pink flagging marked "Escape Route" (NFES 0566). Crews with colorblind members may wish to carry and utilize fluorescent chartreuse flagging (NFES # 2396).
  - - Determine escape time--consider slowest person, fatigue, and temperature factors.
    - Continuously reassess the situation with regard to work progress and additional resource arrivals.
    - Assure all line personnel are familiar with escape routes.
    - Vehicles parked for escape.
