

**National Interagency Coordination Center
Incident Management Situation Report
Sunday, October 3, 2010 – 0530 MT
National Preparedness Level 2**

National Fire Activity

Initial attack activity: Light (70 new fires)
 New large fires: 2 (*)
 Large fires contained: 0
 Uncontained large fires: ** 5
 Area Command Teams committed: 0
 NIMOs committed: 1
 Type 1 IMTs committed: 0
 Type 2 IMTs committed: 2

Nationally, there are 82 large fires being managed to achieve multiple objectives.

** Uncontained large fires include only fires being managed under a full suppression strategy.

Predictive Services Discussion: Temperatures will begin to cool today as a large low pressure system moves into the West. Thunderstorms will spread across southern California and the interior West. Most thunderstorms will be wet, although drier storms are possible on the northeastern periphery of moisture across portions of the Great Basin and western Colorado. Low relative humidity and breezy conditions will continue across the lower Mississippi Valley and western Gulf Coast states.

[Link](#) to Predictive Services Outlook products.

Today's discussion is from the
Fireline Safety Category.

REFUSING RISK ("TURN DOWN" PROTOCOL)

Every firefighter has the right and obligation to report safety problems and contribute ideas regarding their safety. Supervisors are expected to give these concerns and ideas serious consideration. When an individual feels an assignment is unsafe, they also have the obligation to identify, to the degree possible, safe alternatives for completing that assignment. Turning down an assignment is one possible outcome of managing risk.

- A turn down is a situation where an individual has determined an assignment cannot be undertaken as given, and they are unable to negotiate an alternative solution.
- A turn down must be based on an assessment of risks and the ability of an individual or organization to control those risks.
- A situation may be a candidate for a turndown if:
 - There is a violation of safe work practices.
 - Environmental conditions make the work unsafe.
 - The forces lack the necessary qualifications or experience.
 - Defective equipment is being used.
- The following steps will be used when turning down an assignment:
 - The individual will directly inform their supervisor that they are turning down the assignment as given. (Document using criteria outlined in the risk management process.)
 - Supervisor will notify the Safety Officer immediately upon being informed. In the absence of a Safety Officer, the appropriate Section Chief or Incident Commander will be notified. This step provides accountability for decisions and initiates communication of safety concerns.
 - If the supervisor requests another resource to perform the assignment, he/she is responsible for informing that resource that the assignment has previously been refused and the reason(s) why.
 - The safety hazard should be documented by the submission of a SAFENET or SAFECOM.
- These actions do not stop an operation from being carried out. This protocol is integral to the effective management of risk as it provides timely identification of hazards to the chain of command, raises risk awareness for both leaders and subordinates, and promotes accountability.
