

**National Interagency Coordination Center
Incident Management Situation Report
Friday, April 13, 2012 – 0800 MT
National Preparedness Level 1**

National Fire Activity

Initial attack activity: Moderate (260 new fires)
 New large fires: 2 (*)
 Large fires contained: 3
 Uncontained large fires: ** 9
 Area Command Teams committed: 0
 NIMOs committed: 0
 Type 1 IMTs committed: 1
 Type 2 IMTs committed: 1

Nationally there are no large fire being managed to achieve multiple objectives.

** Uncontained large fires include only fires being managed under a full suppression strategy.

Southern Area (PL 2)

New fires: 98
 New large fires: 0
 Uncontained large fires: 7
 Type 1 IMTs committed: 1
 Type 2 IMTs committed: 1

Easter Complex (five fires), George Washington & Jefferson NF. IMT1 (Quesinberry). One mile northeast of Buena Vista, VA. Hardwood litter. Moderate fire activity. Numerous residences threatened.

County Line, National Forests in Florida. IMT 2 (Dueitt). Twenty-five miles north of Lake City, FL. Southern rough. Active fire behavior.

Bowens Creek, Daniel Boone NF. Five miles north of Roark, KY. Hardwood litter. Reduction in acreage due to more accurate mapping.

N3S – Socorro District, New Mexico State Forestry

Predictive Services Discussion: A deepening trough in the West will bring scattered rain and snow to the region from the coastal regions to the northern and central Rockies. Strong winds and low relative humidity will create critical fire weather conditions across much of the Southwest from Arizona to west Texas. Gusty winds and low humidity will also develop eastern Montana and western North Dakota. A cold front will push into the High Plains and upper Midwest producing scattered showers and thunderstorms from Texas to Minnesota. High pressure over the eastern U.S. will keep generally cool to mild conditions in place from New England to the Southeast.

Predictive Services Outlook products: <http://www.predictiveservices.nifc.gov/outlooks/outlooks.htm>

**Today's discussion is from the
Miscellaneous Category.**

Radio Narrow banding

The ability to have positive, reliable communication is one of the most important safety considerations we have in Wildland fire. As we are forced to adapt to technological changes, maintaining good radio communications becomes more complex and requires a heightened level of skill and awareness from all firefighters. The following are some facts and suggestions that may make radio communications easier

- Federal Agencies have been congressionally mandated to narrowband their frequencies by January 1, 2005. State and municipal agencies will not have to follow suit until the year 2013. For firefighters trying to determine if a frequency will be narrow banded or not, this means that it is probably a good bet that Federal frequencies (those frequencies between 162.0000 and 174.0000 Mhz) are.
- Operating your radio in the wideband mode while working in a narrowband environment may cause radio communication problems for everyone working on that channel. The symptoms may range from distorted transmissions to no transmission at all.
- Before we were mandated to work in narrowband, frequencies were listed with just three digits past the decimal point. It is imperative that we now convey frequencies with four digits past the decimal point, for example 168.xxxx
- Some firefighters mistakenly believe that if they simply punch in four numbers past the decimal point, the channel will then be narrow banded. This is not true! Each channel must be programmed specifically to operate in wideband or narrowband. Narrowband programming instructions for most handheld radios can be found at www.fireradios.net
Another website that has programming instructions as well as pocket cards that can be printed is: www.fs.fed.us/fire/niicd/documents
- Check your frequency guides, plans and maps to see which mode the frequencies are supposed to be operating on. If these don't have the information you need, find it and make pen and ink notes for yourself.
- If available, have a radio technician check your radio to ensure you are operating in the proper mode on the assigned frequencies.
- Discuss the narrow/wide band concept with all firefighters, managers and pilots.
