

**National Interagency Coordination Center
Incident Management Situation Report
Wednesday, May 16, 2012 – 0800 MT
National Preparedness Level 2**

National Fire Activity

Initial attack activity: Moderate (218 new fires)
 New large fires: 3 (*)
 Large fires contained: 2
 Uncontained large fires: ** 8
 Area Command Teams committed: 0
 NIMOs committed: 0
 Type 1 IMTs committed: 1
 Type 2 IMTs committed: 3

Nationally there are no large fires being managed to achieve multiple objectives.

** Uncontained large fires include only fires being managed under a full suppression strategy.

Southwest Area (PL 3)

New fires: 11
 New large fires: 0
 Uncontained large fires: 4
 Type 1 IMTs committed: 1
 Type 2 IMTs committed: 2

Gladiator, Prescott NF. IMT 1 (Reinarz). Started on state land one mile east of Crown King, AZ. Timber. Active fire behavior. Numerous residences threatened. Community of Crown King evacuated.

Bull Flat, Fort Apache Agency, BIA. IMT 2 (Philbin). Twenty miles northwest of Cibecue, AZ. Brush and grass. Moderate fire activity. Reduction in acreage due to more accurate mapping.

Sunflower, Tonto NF. IMT 2 (Templin). Thirty miles north of Mesa, AZ. Pinyon pine, juniper, brush and grass. Active fire behavior. Structures threatened.

Elwood, San Carlos Agency, BIA. Thirty-six miles northeast of San Carlos, AZ. Timber. Active fire behavior.

MIS – Michigan DNR

Predictive Services Discussion: A weak trough moving across the Great Basin will produce isolated high-based thunderstorms along with gusty winds and low relative humidity across the Four Corners region. A cold front will enter the Northwest but temperatures across most of the West will remain quite warm. A cold front dropping through the Plains and the Midwest will bring cool and dry weather to much of the central U.S. while showers and a few thunderstorms move off the East coast from South Carolina to Maine. In Alaska, a few lingering showers will dot the eastern Interior while widespread rain moves into the west. The rest of the state will remain cool and mostly dry.

Predictive Services Outlook products: <http://www.predictiveservices.nifc.gov/outlooks/outlooks.htm>

Today's discussion is from the
**LCES (Lookouts, Communication, Escape
Routes, and Safety Zones) Category.**

Escape Routes (part 2)

Escape Routes are the path the firefighter takes from their current locations, exposed to the danger, to an area free from danger. Notice that escape routes is used instead of escape route(s). Unlike the other components, there always must be more than one escape route available to the firefighter. Escape routes are probably the most elusive component of LCES. Their effectiveness changes continuously. As the firefighter works along the fire perimeter, fatigue and spatial separation increases the time required to reach the safety zone. The most common escape route (or part of an escape route) is the fireline. On indirect or parallel fireline, situations become compounded. Unless safety zones have been identified ahead, as well as behind, firefighters retreat may not be possible.

- Have you ever timed an escape route? If not how do you judge its effectiveness?
- Describe a time when you were uncomfortably distant from your escape route.
- Describe a method you have used to communicate an escape route to your crews.
