

**National Interagency Coordination Center
Incident Management Situation Report
Tuesday, June 26, 2012 – 0530 MT
National Preparedness Level 3**

National Fire Activity

Initial attack activity:	Light (178 new fires)
New large fires:	15 (*)
Large fires contained:	5
Uncontained large fires: **	29
Area Command Teams committed:	1
NIMOs committed:	1
Type 1 IMTs committed:	3
Type 2 IMTs committed:	5

** Uncontained large fires include only fires being managed under a full suppression strategy.

Two MAFFS C-130 aircraft from the 302nd Airlift Wing, Colorado Springs (US Air Force Reserve), and two MAFFS from the 153rd Airlift Wing, Cheyenne (Wyoming Air National Guard), and support personnel have been activated and will operate in Colorado.

Rocky Mountain Area (PL 5)

New fires:	16
New large fires:	1
Uncontained large fires:	7
Area Command Teams committed:	1
NIMOs committed:	1
Type 1 IMTs committed:	2
Type 2 IMTs committed:	2

Anderson's Area Command Team has been assigned to Rocky Mountain Geographic Area.

Waldo Canyon, Pike and San Isabel NF. IMT 1 (Harvey). Three miles west of Colorado Springs, CO. Timber, hardwood slash and brush. Active fire behavior with short distance crown runs. Several communities, municipal watersheds and the U.S. Air Force Academy threatened.

High Park, Larimer County. IMT 1 (Lund). Fifteen miles west of Fort Collins, CO. Timber, brush and grass. Group tree torching and short duration crown runs. Subdivisions, communication tower and recreation sites threatened. Evacuations in effect.

Weber, San Juan District, BLM. IMT 2 (Lowe). Six miles south of Mancos, CO. Timber. Active fire behavior with short crown runs and spotting. Numerous structures and communication towers threatened. Evacuations in effect.

Russels Camp, Medicine Bow NF. IMT 2 (Pechota). Thirty miles south of Glenrock, WY. Timber and brush. Moderate fire activity with single tree torching and short range spotting. Structures threatened.

State Line, La Plata County. Seventeen miles southwest of Ignacio, CO. Brush and hardwood slash. Creeping and smoldering. Road closures lifted.

Treasure, Pike and San Isabel NF. Five miles northeast of Leadville, CO. Timber. Creeping and group tree torching. Structures threatened.

Little Sand, San Juan NF. NIMO (Kleinman). Thirteen miles northwest of Pagosa Springs, CO. Timber. Backing fire with group tree torching. Structures threatened. Evacuations in effect.

* **Last Chance**, Washington County. One mile southeast of Last Chance, CO. Grass. Running fire. Structures and communication site threatened.

Predictive Services Discussion: A cold front will move through the Northwest to the northern Great Basin. Gusty winds and low relative humidity will continue across the eastern Great Basin and the northern and central Rockies. Widely scattered thunderstorms will develop ahead of the front over the higher terrain of Colorado, New Mexico and Arizona. Scattered showers and thunderstorms will also form across the Northwest and the northern Rockies. Hot and dry weather will return to the desert Southwest. High pressure will settle into the eastern U.S. Tropical Storm Debby will drift slowly toward the upper Florida Gulf coast, bringing thunderstorms and heavy rain to much of Florida and southern Georgia. In Alaska, rain will return to the Southeast with diurnal showers and thunderstorms across parts of the Interior.

<http://www.predictiveservices.nifc.gov/outlooks/outlooks.htm>

**Today's Discussion is From
"This Day in History"**

"Lessons Learned" serve as brief summaries of powerful learning opportunities. You can use these summaries as a foundation and launch point for further dialogue and discussion. Apply these lessons learned to yourself, your crew, and your unit.

Dude Fire – June 26th 1990 - Arizona

Incident Summary: June of 1990 will long be remembered as one of the hottest months in Arizona history. On June 26th the temperature rose to record temperatures of 122 F in Phoenix and to 106 F in Payson. In addition to the extreme temperatures, Arizona had been in a severe 3 year drought, the combination producing a critically high fire danger throughout the state, especially the Mogollon Rim country and the Tonto National Forest north of Payson. Fuels in the area are primarily ponderosa pine with an understory of mixed oak, manzanita, needle and leaf litter, and scattered large (greater than 6 inch diameter) dead logs. Much of the understory brush is heavily draped with very dry pine needles. Live fuel moisture of the manzanita and oak is very low (76%), fine dead fuel moisture is 3% and 8% for larger dead fuels.

At 1230 June 25th, 1990, a dry lightning storm starts a fire under the Mogollon Rim on the Payson Ranger District, Tonto NF Arizona. The fire is on a steep SW facing slope at 6400 ft elevation. At 1330, the fire is estimated from the air at 5 acres, 50 acres one hour later, and over 100 acres by 1615 with a spot fire one mile east of the main fire. By 1800 a Type II IMT has arrived and a Type I IMT and 18 crews had been ordered. The fire is being pushed by brisk down canyon winds and is 1900 acres by 0500 the 26th and is threatening the forest subdivision of Bonita Creek Estates. A convection column, aided by combustion, begins forming over the fire by 1000. The column continued to grow and becomes a fully mature thunderstorm by 1400. Radio and frequency issues are causing a breakdown in communication between the crews and the overhead team. The teams are transitioning mid-shift resulting in confusion between the crews and supervision. The thunderstorm begins to decay creating strong downbursts channeled by the topography, causing dramatic down and across slope fire spread on nearly all sides of the fire. Members of the Perryville Fire Crew will not be able to escape from the fast and erratic fire spread. **Five are injured. Six will die on the fireline.**

Lessons Learned Discussion Points

The fire behavior indicator system "Look Up, Look Down, Look Around" was developed in response to this tragedy fire.

- Using page 2 and 3 in your IRPG (2010), what indicators are most significant in your area to let you know the fire behavior may become problematic?

The Haines Index, a measure of the atmospheres effect on a fire's growth potential, was adopted for inclusion on Fire Weather forecasts issued by the National Weather Service.

- Review and discuss the Haines Index information on page 75 in your IRPG.

In his paper "[LCES and Other Thoughts](#)", Paul Gleason writes about kneeling next to one of the Perryville firefighters and of his promise to help end needless fatalities and near misses.

- Review page 6 in your IRPG and discuss how you and your crew establish and maintain LCES.
- Discuss the difference between establishing LCES and maintaining LCES.
