

**National Interagency Coordination Center  
Incident Management Situation Report  
Wednesday, June 27, 2012 – 0530 MT  
National Preparedness Level 3**

**National Fire Activity**

Initial attack activity:	Moderate (220 new fires)
New large fires:	11 (*)
Large fires contained:	3
Uncontained large fires: **	35
Area Command Teams committed:	1
NIMOs committed:	1
Type 1 IMTs committed:	5
Type 2 IMTs committed:	9

\*\* Uncontained large fires include only fires being managed under a full suppression strategy.

[Link](#) to Geographic Area daily reports.

Two MAFFS C-130 aircraft from the 302<sup>nd</sup> Airlift Wing, Colorado Springs (US Air Force Reserve), and two MAFFS from the 153<sup>rd</sup> Airlift Wing, Cheyenne (Wyoming Air National Guard), and support personnel have been activated and will operate in Colorado.

**Rocky Mountain Area (PL 5)**

New fires:	18
New large fires:	4
Uncontained large fires:	10
Area Command Teams committed:	1
NIMOs committed:	1
Type 1 IMTs committed:	3
Type 2 IMTs committed:	2

Anderson's Area Command Team has been assigned to Rocky Mountain Geographic Area.

**Waldo Canyon**, Pike and San Isabel NF. IMT 1 (Harvey). Three miles west of Colorado Springs, CO. Timber, hardwood slash and brush. Extreme fire behavior with crown runs. Several communities, municipal watersheds and the U.S. Air Force Academy threatened.

\* **Flagstaff**, Boulder County. IMT 1 (Opliger). One mile southwest of Boulder, CO. Timber. Active fire behavior with running and group tree torching. Structures threatened. Evacuations and road closures in effect.

**High Park**, Larimer County. IMT 1 (Lund). Fifteen miles west of Fort Collins, CO. Timber, brush and grass. Group tree torching and short duration crown runs. Subdivisions, communication tower and recreation sites threatened. Evacuations in effect.

**Weber**, San Juan District, BLM. IMT 2 (Lowe). Six miles south of Mancos, CO. Timber. Isolated torching and short-range spotting. Numerous structures and communication towers threatened. Evacuations in effect.

**Russels Camp**, Medicine Bow NF. IMT 2 (Pechota). Thirty miles south of Glenrock, WY. Timber and brush. Moderate fire activity with single tree torching. Structures threatened. Reduction in acreage due to more accurate mapping.

**Little Sand**, San Juan NF. NIMO (Kleinman). Thirteen miles northwest of Pagosa Springs, CO. Timber. Surface fire with torching and short-range spotting. Structures threatened. Evacuations in effect.

\* **Crow Peak**, Black Hills, NF. Three miles southwest of Spearfish, SD. Hardwood litter and logging slash. Backing fire. Structures threatened.

\* **Otter Creek/Upper Bee**, Wind River/Bighorn District, BLM. Twenty miles southeast of Tensleep, WY. Juniper, hardwood slash and brush. Extreme fire behavior with crowning and long-range spotting. Structures threatened.

\* **Cato**, Johnson County. Sixteen miles east of Buffalo, WY. Brush and grass. Active fire behavior.

**Treasure**, Pike and San Isabel NF. Five miles northeast of Leadville, CO. Timber. Creeping and group tree torching.

**State Line**, La Plata County. Seventeen miles southwest of Ignacio, CO. Brush and hardwood slash. Minimal fire activity.

Total	17	92,406	1	3	0	50

This table does not include fires reported in the large fire section of this report. Updated weekly.

**Predictive Services Discussion:** Gusty winds and low relative humidity will produce critical fire conditions across parts of Wyoming and northwestern Colorado. Lingering moisture under a building ridge over the Southwest will fuel widely scattered thunderstorms across the Colorado and New Mexico mountains. Hot and dry conditions will continue across much of the desert Southwest while mild weather remains another day across the Northwest and northern Rockies. High pressure over the eastern U.S. will keep warm and dry weather across the region. Tropical Storm Debby will move across northern Florida and weaken. In Alaska, scattered showers will increase across the South while isolated thunderstorms develop in the eastern and central Interior.

<http://www.predictiveservices.nifc.gov/outlooks/outlooks.htm>

## Today's discussion is from "This Day in History"

A "This Day in History" is a brief summary of a powerful learning opportunity. You can use this summary as a foundation and launch point for further dialogue and discussion.  
Apply these lessons learned to yourself, your crew, your team and your unit.

### LCES – June 1991

**"The afternoon of June 26, 1990, as I knelt beside a dead Perryville firefighter, I made a promise to the best of my ability to help end the needless fatalities, and alleviate the near misses, by focusing on training and operations pertinent to these goals."** Paul Gleason from "LCES and Other Thoughts" published June 1991.

(Note: Gleason had used LCES with his crew the Zig Zag IHC for several years but it was the Dude Fire fatalities that became the catalyst for LCES to hit the mainstream.)

"LCES is just a re-focusing on the essential elements of the FIRE ORDERS. The systems view stresses the importance of the components working together. The LCES system is a result of analyzing fatalities and near misses for over 20 years of active fireline suppression duties. I believe that all firefighters should be given an interconnecting view of Lookout(s), Communications(s), Escape routes and Safety zone(s)." Paul Gleason

Gleason cites two types of hazards:

- Subjective hazards are those which one has direct control over (e.g., condition of the equipment, choices and decisions).
- Objective hazards are a natural part of the environment (e.g., lightning, fire-weakened timber, rolling rocks, entrapment). They cannot be eliminated and one must either 1) not go into the environment where they exist or 2) adhere to a procedure where safety from the hazard is assured.

Gleason suggested that LCES is the key to this safe procedure in an environment of hazards and that LCES must be established AND communicated to ALL firefighters BEFORE it is needed.

**L**ookouts need to be in a position where *both* the objective hazard and the firefighters can be seen. Lookouts must be trained to observe the wildland fire environment and to recognize and anticipate changes in fire behavior. The whole idea is when the objective hazard becomes a danger the Lookout relays the information to the firefighters so they can reposition to the safety zone or safer area.

- What are the objective hazards that a Lookout is looking for?
- What are the tools and skills that a good Lookout should possess?
- Discuss how your crew can utilize a roving Lookout.
- Discuss how each person on your crew/team has a role and responsibility in recognizing and communicating hazards.

**C**ommunications is the vehicle which delivers the message to the firefighters, alerting them of the approaching hazard. Communications must be prompt and clear.

- Radios are limited and it is vital to have at least one back up way to quickly Communicate information. Discuss some options that your crew/team can use in this situation.
- Using page ix in your IRPG, discuss the 5 Communication responsibilities every firefighter has. Identify how your crew/team will translate these ideas into action when working in the field.

**E**scape routes are the paths firefighters take from their current location, in which they are exposed to danger, to an area free from danger. Unlike the other components, there must always be more than one Escape route available to the firefighter. With their effectiveness continually changing, Escape routes are probably the most elusive component of LCES. As the firefighter works along the fire perimeter, fatigue and spatial separation increases the time required to reach the safety zone. On indirect or parallel fireline, situations become compounded. Unless Escape routes have been identified ahead, as well as behind, a firefighter's retreat may not be possible.

- Using your IRPG page 6, discuss qualities of effective Escape routes.

**S**afety Zones are planned locations where fire-fighters may find refuge from danger and where no fire shelter is needed. Fireline intensity and Safety zone topography determine its effectiveness.

- **Activity:** Using your IRPG page 7, mark off a Safety zone that would be effective for the area you are currently in or often work in. Being able to see just how big a Safety zone will have to be to become effective can help us choose one quicker in the field. (FYI: The Safety zone guidelines in the IRPG are for no-wind and no-slope conditions. Make necessary adjustments in size to reflect realistic slope and wind.)
