Incident Management Situation Report
Monday, August 27, 2012 – 0530 MT
National Preparedness Level 4**

National Fire Activity

Initial attack activity:	Light (98 new fires)
New large fires:	1 (*)
Large fires contained:	4
Uncontained large fires: **	25
Area Command Teams committed:	0
NIMOs committed:	3
Type 1 IMTs committed:	6
Type 2 IMTs committed:	7

** Uncontained large fires include only fires being managed under a full suppression strategy.

Four MAFFS C-130 aircraft and support personnel from the 302nd Airlift Wing, Colorado Springs (US Air Force Reserve), and the 153rd Airlift Wing, Cheyenne (Wyoming Air National Guard) are supporting wildland fire suppression operations out of Boise, ID. One MAFFS from the 145th Airlift Wing, Charlotte (North Carolina Air National Guard), along with one MAFFS from the 146th Airlift Wing, Channel Islands (California Air National Guard) are supporting wildland fire suppression operations out of Sacramento, CA.

Northern California Area (PL 5)

New fires:	13
New large fires:	0
Uncontained large fires:	8
NIMOs committed:	1
Type 1 IMTs committed:	3
Type 2 IMTs committed:	2

North Pass, Mendocino NF. IMT 2 (Wakoski). Twenty-five miles northeast of Covelo, CA. Timber and logging slash. Crown runs and spotting. Structures and communications site threatened. Evacuations and area closures in effect.

Chips, Plumas NF. IMT 1 (Opliger). Twenty miles northwest of Quincy, CA. Timber and brush. Extreme fire behavior with spotting. Communities threatened.

Bagley, Shasta-Trinity NF. IMT 2 (Whitcome). Seven miles west of Big Bend, CA. Timber. Active fire behavior with torching and spotting. Structures and high voltage power lines threatened.

Fort Complex (3 fires), Klamath NF. NIMO (Kleinman). Ten miles northwest of Happy Camp, CA. Timber. Backing fire. Structures threatened. Road and trail closures in effect.

Ponderosa, Tehama-Glenn Unit, Cal Fire. Cal Fire IMT 1 (Kaslin). Two miles east of Manton, CA. Timber. Minimal fire activity. Numerous structures threatened.

Rush, Northern California District, BLM. IMT 1 (Turman). Fifteen miles southeast of Ravendale, CA. Juniper and brush. Creeping and smoldering. Structures threatened. Reduction in acreage due to more accurate mapping.

This table does not include fires reported in the large fire section of this report. Updated weekly.

Predictive Services Discussion: Strong, gusty winds and areas of low relative humidity will create critical fire weather conditions from northern California to western Montana and northern Wyoming. Isolated, high-based thunderstorms are possible in the Wyoming and western Montana mountains. Widely scattered afternoon thunderstorms will also form across the central and southern Rockies and the higher elevations of Utah and Arizona. In the East, showers and thunderstorms will form along a weak front stretching from the Great Lakes to North Texas. Meanwhile, Hurricane Isaac will bring strong thunderstorms and heavy rain to the southern Florida as it moves through the eastern Gulf of Mexico.

SEAT Accident, Meeker Colorado, August 27th 2008

Incident Summary: A Single Engine Air Tanker (SEAT) is directed by Air Attack to drop on the right flank of the Flat Bush Fire. During the first retardant drop the SEAT's flight pattern takes the aircraft in close proximity to staged firefighters and vehicles. During the drop sequence the pilot's side cockpit door comes open and forces him to abbreviate the drop. The pilot relays to Air Attack that he has a problem with his "door", and having just seen the abbreviated drop, Air Attack assumes the problem door is the retardant gate. He asks several times about the status of the pilot and aircraft. At no time did Air Attack understand that the problem was actually with the cockpit door and the pilot never fully conveys the true nature of his problem. The pilot requests to jettison the remaining retardant. Air Attack assumes the problem is corrected and asks the pilot to reinforce the previous drop. The pilot agrees with this request instead of asking to land to fix the problem. On approach for the second drop, the pilot uses an aggressive turn at low altitude to align the aircraft for the drop. The approach is directly over the top of the firefighters again. As a result of the aggressive maneuver, the aircraft stalls and crashes. Debris from the accident damages two wildland fire engines and narrowly misses the six firefighters. The aircraft's engine lands just 6 feet from an occupied vehicle. The crew is unharmed, the vehicles receive minor shrapnel damage, and although the aircraft is destroyed, the pilot only receives minor injuries.

Lessons Learned Discussion Points

Apply the concept of LCES to this incident; not from a fire perspective but an aviation point of view.

(L) Lookouts look for hazards (situations and actions) and communicate them. Aircraft flying directly overhead are a hazard. Helicopters accidentally release longlines, buckets and sling loads multiple times each season. Water and retardant drops often miss intended targets, creating the potential for injury by the drops themselves or debris from vegetation.

- What other ways can "lookouts" be utilized in aviation?

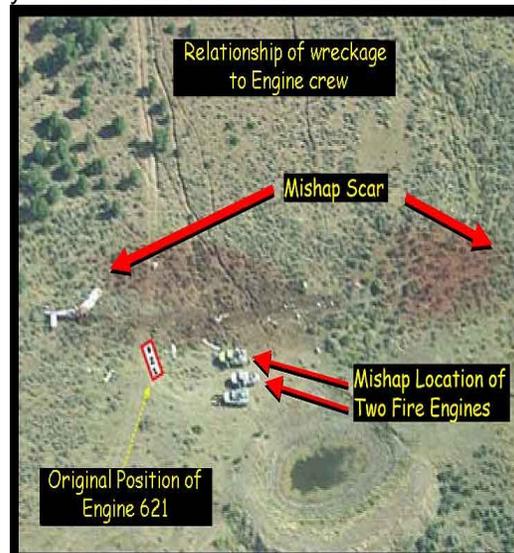

(C) If you see something wrong...say something! Communication is about being understood.

- Discuss what might have been communicated about this pilot's first drop that may have prevented the crash on the second.

Most of us have seen something that may have been unsafe but didn't say anything.

- Have your group discuss reasons why that happens. Have your group come up with one good way to avoid that dilemma and plan to practice it today.

(E & S) Just as for wildland fire, escape routes and safety zones are needed for aviation operations as well. The ground personnel on this incident may have been in a safe location in regards to the fire but not in a safe location in relation to the aircraft. Keep in mind that if something goes wrong with an aircraft, ground crews may not have time to move to a safer location. If you are in the flight path of an aircraft, communicate it. Either you can be moved or the aircraft can.
