

**National Interagency Coordination Center
Incident Management Situation Report
Friday, May 31, 2013 – 0530 MT
National Preparedness Level 1**

National Fire Activity

Initial attack activity: Light (104 new fires)
 New large fires: 2 (*)
 Large fires contained: 1
 Uncontained large fires: ** 4
 Area Command Teams committed: 0
 NIMOs committed: 0
 Type 1 IMTs committed: 0
 Type 2 IMTs committed: 2

** Uncontained large fires include only fires being managed under a full suppression strategy.

Southern California Area (PL 2)

New fires: 18
 New large fires: 1
 Uncontained large fires: 2
 Type 2 IMTs committed: 1

* **Powerhouse**, Angeles NF. IMT 2 (Walker). Two miles southwest of Green Valley, CA. Brush. Extreme fire behavior with long-range spotting. Numerous residences threatened. Evacuations and closures in effect.

General, Monte Vista Unit, Cal Fire. Four miles east of Julian, CA. Chaparral. Minimal fire activity.

Predictive Services Discussion: An upper low will move across the central U.S. while high pressure builds over the West and East. Scattered showers and thunderstorms will develop from the northern Rockies to the Great Lakes and along the Mississippi Valley to the Gulf Coast. Warm and humid conditions will continue in the East and Plains while dry and warm conditions in the Southwest spread northward into the Great Basin. Cool weather will remain in the northern and central Rockies.

HAZARD TREE FELLING – SECURE FELLING AREA

Hazard Tree Category

DISCUSSION: The following fundamental safety principles for tree felling operations have been established based on repeated lessons learned following serious accidents. To protect sawyers, swampers, and operational personnel from exposure to potential traumatic injury or death during tree felling operations, the following safety procedures should be applied to all felling activities. Fireline supervisors should continue to monitor all felling operations to ensure the following safe job procedures are consistently applied:

- A secure felling area, **MINIMUM OF TWO AND ONE HALF (2.5) TIMES THE HEIGHT OF THE MATERIAL BEING FELLED IN ALL DIRECTIONS**, needs to be established and maintained by the faller during all tree felling operations. In addition, the entire downhill side on slopes must be secured if materials can fall/role for a long, unpredictable distance.
- No one shall be permitted in the secured felling area without the authorization of the faller.
- The faller shall establish a safety zone outside the secured area, and direct EVERYONE to remain there until all felling is completed, and an "all clear" has been communicated.
- Safety zones should be established, whenever practical, in the opposite direction of the planned fall, and at a distance of at least 2.5 times the height of the trees being felled.
- The faller shall assign Lookout(s). The lookout(s) shall have reliable communications with the faller, and other personnel adjacent to the secure areas.
- Competent lookouts shall be established and maintained by the faller at all major access points of roads and trails that afford access to the secured felling area.
- The faller will ensure that no hazards remain such as hang-ups, unstable logs, or other dangers before approving access or leaving the secured area
