

**National Interagency Coordination Center
Incident Management Situation Report
Friday August 2, 2013 – 0530 MT
National Preparedness Level 3**

National Fire Activity

Initial attack activity:	Moderate (208 new fires)
New large fires:	17 (*)
Large fires contained:	4
Uncontained large fires: **	31
Area Command Teams committed:	0
NIMOs committed:	1
Type 1 IMTs committed:	3
Type 2 IMTs committed:	14

** Uncontained large fires include only fires being managed under a full suppression strategy.

[Link](#) to Geographic Area daily reports.

A member of a falling crew assigned to a fire on the Deschutes National Forest near Bend, OR, was fatally injured by a falling snag on August 1. The firefighting community extends condolences to family and friends of the deceased.

One MAFFS C-130 aircraft from the 145th Airlift Wing, Charlotte (North Carolina Air National Guard), and one from the 153rd Airlift Wing, Cheyenne (Wyoming Air National Guard), are supporting wildland fire suppression operations out of Boise, ID.

Northwest Area (PL 4)

New fires:	41
New large fires:	3
Uncontained large fires:	14
Type 1 IMTs committed:	1
Type 2 IMTs committed:	6

Douglas Complex (four fires), Oregon DOF. IMT 2 (Sifford). Seven miles north of Glendale, OR. Timber and brush. Active fire behavior with torching and short-range spotting. Numerous structures and a communication site threatened. Evacuations and road closures in effect.

Colockum Tarps, Southeast Region, Washington DNR. IMT 2 (Nickey). Six miles southeast of Malaga, WA. Timber and grass. Active fire behavior. Numerous residences threatened. Evacuations in effect.

Whiskey Complex (three fires), Umpqua NF. IMT 2 (Williams). Six miles east of Tiller, OR. Timber, brush and grass. Moderate fire behavior. Structures threatened. Evacuations and area closure in effect.

Big Windy Complex (two fires), Grants Pass Unit, Oregon DOF. IMT 1 (Schulte). Twenty-five miles northwest of Grants Pass, OR. Timber and brush. Surface fire with occasional single tree torching. Structures threatened. Area closures in effect.

Brimstone, Grants Pass Unit, Oregon DOF. IMT 2 (Thorpe). Seven miles northwest of Merlin, OR. Timber. Moderate fire behavior with torching and short-range spotting. Numerous structures threatened. Road closures in effect.

Mile Marker 28, Yakama Agency, BIA. IMT 2 (Rabe). Fifteen miles northeast of Goldendale, WA. Timber, brush and grass. Interior burning with isolated torching. Numerous structures and power lines threatened. Reduction in acreage due to more accurate mapping.

Labrador, Rogue River-Siskiyou NF. IMT 2 (Fillis). Thirteen miles northwest of Cave Junction, OR. Timber and brush. Active fire behavior with torching. Structures threatened.

* **Stemler Ridge**, Vale District, BLM. Four miles north of Juntura, OR. Juniper, brush and grass. Minimal fire behavior with torching. Structures threatened.

* **Green Ridge**, Deschutes NF. Fourteen miles northwest of Sisters, OR. Timber and brush. Short crown runs with isolated torching. Structures threatened. Evacuations and area closures in effect.

* **Arctic Dan**, North Cascades NP. Twenty-eight miles northeast of Marblemount, WA. Timber. Short crown runs with torching. Last report unless significant activity occurs.

Predictive Services Discussion: Scattered showers and thunderstorms will spread across the Northwest, the northern Rockies, the northern Plains, and the Ohio Valley. Thunderstorms will also form across the southern Rockies and along the Southeast and eastern Gulf coasts. Cooler conditions will move into the Northwest as well as the Upper Midwest, the Great Lakes and New England. Warm and humid conditions will continue in the southern Plains. Hot and dry weather will remain over the far Southwest deserts.

Liquefied Propane Gas (LPG) Tank Hazards

Wildland / Urban Interface Category

Liquefied Propane Gas (LPG) tanks are commonly found in the wildland-urban interface and present hazards to firefighters in that environment. LPG tanks may be found in a number of other environments such as motor homes, travel trailers, grills, camp stoves, lanterns, etc. Directly attacking LPG tank fires is a structural fire task involving hazardous materials and should only be attempted by trained personnel using full structural personal protective equipment and equipped with a volume of water adequate to safely attack the fire.

- **Boiling Liquid Expanding Vapor Explosions (BLEVE)**
 - The most recognized hazard with LPG tanks is BLEVE (Boiling Liquid Expanding Vapor Explosions) or sudden complete failure of the tank. Some training courses have directed responders to approach the tank from the sides, believing that the force of the explosion will occur on the ends of the tank. However, this is not a guarantee that you will be safe from projectiles or missiles from the explosion, as they may travel in ALL directions up to 2,500 feet away. Leave the area immediately if you smell propane; hear a rising sound from venting safety devices or see discoloration or deformation of the tank. If you leave the area, get at least 2,500 feet away and do not go down wind or down slope of the leaking propane. BLEVEs are a major hazard to emergency responders!
- **Fuel Reduction Around Tanks**
 - Wildland firefighters may take action to prevent direct flame impingement on LPG tanks by removing wildland fuels in the area. However, be aware that lines from the tank to structures may be above or below ground, and may be cut by tools or equipment. Propane gas is heavier than air, and may move along the ground at some distance, and may ignited when in reaches open flame or another ignition source. Use extreme caution when doing fuels reduction around tanks, and flag any lines you encounter.
- **Other Wildland Fire Considerations**
 - Do not position engines or other apparatus near LPG tanks or downwind / down slope from tanks.
 - Do not deploy fire shelters near LPG tanks or downwind / down slope from tanks.
- **Cooling Tanks**
 - In light fuels such as grasses, where any heat exposure to the tank will be very limited, rapid application of cooling water on the outside of the tank above the liquid level can reduce the likelihood of container failure by lowering the external temperature of the shell of the exposed tank. Water should not be directed at the valve safety devices, due to the potential of "icing" the valve closed.
 - In heavy fuels where long duration heat exposure to the LPG tank is likely, evacuate all personnel and equipment 2,500 feet away and not down slope or down wind. NFPA says that direct flame impingement protection requires water flow of at least 500 gpm from an unmanned monitor nozzle. This is a situation for properly trained, equipped and supported structural firefighters.
