

**National Interagency Coordination Center  
Incident Management Situation Report  
Wednesday, August 14, 2013 – 0530 MT  
National Preparedness Level 4**

**National Fire Activity**

Initial attack activity:	Moderate (201 new fires)
New large fires:	5 (*)
Large fires contained:	3
Uncontained large fires: **	36
Area Command Teams committed:	0
NIMOs committed:	0
Type 1 IMTs committed:	5
Type 2 IMTs committed:	16

\*\* Uncontained large fires include only fires being managed under a full suppression strategy.

[Link](#) to Geographic Area daily reports.

One MAFFS C-130 aircraft from the 153<sup>rd</sup> Airlift Wing, Cheyenne (Wyoming Air National Guard) and one from the 302<sup>nd</sup> Airlift Wing, Colorado Springs (Air Force Reserve) are supporting wildland fire suppression operations out of Boise, ID. Two MAFFS from the 146<sup>th</sup> Airlift Wing (California Air National Guard) are supporting wildland fire suppression operations out of Channel Islands Air National Guard Station, CA.

**Eastern Great Basin Area (PL 5)**

New fires:	34
New large fires:	3
Uncontained large fires:	12
Type 1 IMTs committed:	2
Type 2 IMTs committed:	4

**Pony Complex**, Boise District, BLM. IMT 2 (Wilde). Twelve miles north of Mountain Home, ID. Timber, brush and grass. Active fire behavior with single tree torching and short-range spotting. Structures threatened. Road and area closures in effect. No acreage update due to smoke limiting aerial mapping.

**Elk**, Boise NF. IMT 1 (Harvey). Ten miles southwest of Pine, ID. Timber, brush and grass. Extreme fire behavior with sustained crown runs and long-range spotting. Numerous structures threatened. Evacuations and area closures in effect.

**Beaver Creek**, Twin Falls District, BLM. IMT 1 (Lund). Twelve miles northeast of Fairfield, ID. Timber, brush and grass. Active crown fire. Area closures in effect.

\* **Rockport**, Northwest Area, Utah DOF. Ten miles northeast of Park City, UT. Brush. Running fire with torching and spotting. Numerous residences threatened. Evacuations in effect.

**McCan**, Twin Falls District, BLM. IMT 2 (Kidd). Four miles northwest of Fairfield, ID. Timber, brush and grass. Creeping, smoldering with single tree torching. Structures threatened.

**State**, Bear River Area, Utah DOF. IMT 2 (Day). Eight miles west of Portage, UT. Timber, brush and grass. Backing fire with occasional runs. Structures threatened. Evacuations in effect.

**Millville**, Bear River Area, Utah DOF. Six miles southeast of Logan, UT. Timber and grass. Moderate fire behavior. Numerous structures threatened.

**Lodgepole**, Salmon-Challis NF. IMT 2 (Whalen). Ten miles west of Challis, ID. Timber and brush. Creeping with isolated torching. Structures threatened.

\* **Tank**, Boise District, BLM. Twenty miles southeast of Jordan Valley, OR. Timber, brush and grass. Active fire behavior.

**Ridge**, Boise NF. Fourteen miles northeast of Lowman, ID. Timber. Creeping and smoldering with isolated torching.

**Green**, Bridger-Teton NF. Previously reported incident. Twenty-nine miles northeast of Cora, WY. Timber. Creeping and smoldering. Precipitation occurred over the fire area yesterday. Last report unless significant activity occurs.

**Patch Springs**, Salt Lake Field Office, BLM. Two miles northwest of Terra, UT. Timber. Backing fire with group tree torching.

\* **Placer**, Boise NF. Four miles south of Idaho City, ID. Timber, brush and grass. Running fire with torching.

**Predictive Services Discussion:** The West will continue to warm and dry, as high pressure builds over the region. Isolated to widely scattered thunderstorms will form across the Rockies from Wyoming to New Mexico and over the higher terrain of Utah. Scattered showers and thunderstorms will develop along a stalled front along the Gulf Coast states. Mild to warm weather will continue over the Midwest to the East Coast. Alaska will remain warm and dry through the Interior, with scattered showers in the South and West.

<http://www.predictiveservices.nifc.gov/outlooks/outlooks.htm>

## FIRE SHELTER DEPLOYMENT

*Entrapment Category*

**Firefighters must never rely on fire shelters, but instead should depend on well-defined and pre-located escape routes and safety zones. However, if the need for shelter deployment should ever arise, it is imperative that the firefighter knows how to deploy and use the shelter.**

- Don't think of your fire shelter as a tactical tool.
  - Recognize when deployment is your only option. When considering escape, remember that you can hold your breath for only about 15 seconds while running through flames or superheated air.
  - If time runs out while attempting to escape, get on the ground before the flame front arrives and finish deploying on the ground. Death is almost certain if the fire catches a person off the ground. (The optimal survival zone with or without a shelter is within a foot of the ground.) Once entrapped, the highest priority is to protect the lungs and airways.
  - When deploying, remove packs and place them away from the deployment area.
  - Even though deploying your shelter is a last resort, time is critical when entrapped. Play it safe; give yourself ample time to deploy. Failure to adequately anticipate the severity and timing of the burnover and failure to utilize the best location and proper deployment techniques contributed to the fatalities and injuries on the Thirty Mile incident. Don't let the cost of opening a shelter become a factor in your decision.
  - Before passing through superheated gases, try to close the front of your shroud. You can take your shelter out of the plastic bag and use it for a heat shield to pass quickly through a hot area. If you use the shelter in this way, don't drop it or allow it to snag on brush. Remember that your lungs are still vulnerable.
  - If flames contact the shelter, the glass/foil fabric heats up more rapidly. If flame contact is prolonged, spots of aluminum foil can melt or tear away, reducing protection. Even if this happens, it is still safer inside the shelter. Your flame-resistant clothing becomes your backup protection. It's even more critical to keep your nose pressed to the ground and stay in your shelter.
  - Remember, direct contact with flames or hot gases is the biggest threat to your shelter. It is vital to deploy in a spot that offers the least chance of such contact. The heavier the fuels, the bigger your fuel break needs to be.
  - Remember, once you commit yourself to the shelter, stay there. No matter how bad it gets inside, it is usually much worse outside. If you panic and leave the shelter, one breath of hot, toxic gases could damage your lungs. Suffocation may follow. Most firefighters were killed as a result of heat-damaged airways and lungs, not by external burns. Protect your airways and lungs at all costs by keeping your face close to the ground and staying in your shelter.
1. ***If your crew becomes entrapped, identify everything you and your crew/team are going to do to survive (start your discussion using pages 28-29 in your IRPG).***
  2. ***Activity: Consider having a mock fire shelter deployment exercise in realistic terrain and fuels using practice shelters (no live fire). Assess the exercise using an AAR.***
