

**National Interagency Coordination Center
Incident Management Situation Report
Sunday, September 15, 2013 – 0530 MT
National Preparedness Level 2**

National Fire Activity

Initial attack activity: Light (78 new fires)
 New large fires: 0 (*)
 Large fires contained: 3
 Uncontained large fires: ** 5
 Area Command Teams committed: 0
 NIMOs committed: 0
 Type 1 IMTs committed: 2
 Type 2 IMTs committed: 2

** Uncontained large fires include only fires being managed under a full suppression strategy.

Northern California Area (PL 3)

New fires: 27
 New large fires: 0
 Uncontained large fires: 3
 Type 1 IMTs committed: 1

Clover, Shasta-Trinity Unit, Cal Fire. Transfer of command from Cal Fire IMT 1 (Smith) back to the local unit will occur today. Ten miles southwest of Redding, CA. Timber, brush and grass. Minimal fire behavior.

Forks Complex, Klamath NF. One mile east of Sawyers Bar, CA. Timber and brush. Moderate fire behavior. Structures threatened.

Corral Complex, Six Rivers NF. Ten miles east of Hoopa, CA. Timber and brush. Moderate fire behavior. Area closures in effect.

Predictive Services Discussion: Scattered thunderstorms will develop over the central and southern Rockies, producing locally heavy rain over the Front Range. Showers and thunderstorms will also form along a cold front stretching from northern New Mexico to the Great Lakes. Scattered thunderstorms will form along the Gulf Coast with heavy rain possible in South Texas. A cold front moving into the Northwest will bring rain and a few thunderstorms to Washington, Oregon and parts of Idaho. Most of the northern half of the country and all of the Rockies will be cool to mild. Warm to very warm conditions will continue in the Gulf States and across the Southwest deserts.

BUILDING FIRELINE DOWNHILL WITH FIRE BELOW

Fireline Safety Category

As a general rule, construct line moving uphill. Many firefighters have lost their lives attacking wildland fires from above. If there is no practical alternative to constructing line downhill, proceed only after weighing the following considerations:

- Has the area been scouted for fire perimeter and behavior? Discuss what you need to know about the fire perimeter and fire behavior before building fireline downhill with fire below.
- Will wind direction be at your back? Will it stay at your back? Talk about how winds can change when you are on a slope (e.g., time of day, upslope and down slope breezes, etc.).
- Is the area free of chimneys and gullies? How would you negotiate your line location if there were chimneys and gullies below where you needed to be working?
- Are there adequate safety zones and escape routes as you progress downhill? How do you maintain adequate safety zones and escape routes as you progress downhill?
- Can you carry your burnout downhill as you go to provide an anchor point and safety zones? Discuss how you decide when to carry the burnout with you or wait until you have tied in down below.
- Have lookouts been posted? What do the lookouts need to be on the watch for?
- Do you have good communications, especially with lookouts and crews working towards you? What are some of the dangers of not communicating with lookouts and crews working towards you? What are the benefits of maintaining good communications?
- Can the line be completed and burned out before the fire reaches the line? Discuss how this would affect where you locate the line.
- Do you have adequate resources to complete the assignment? What additional resources might you need to safely take on an assignment that includes building fireline downhill with fire below?
- Is aerial support available if needed? What benefits can aerial resources provide? What might be an added danger from aerial resources in this type of situation? (Common Denominators)
- Has everyone been briefed on the assignment, fire behavior, weather, communications, escape routes and safety zones, hazards and tactics? Discuss who might provide this briefing and where and when it might occur.
