

**National Interagency Coordination Center
Incident Management Situation Report
Friday, October 2, 2015 - 0530 MT
National Preparedness Level 1**

National Fire Activity

Initial attack activity:	Light (59 new fires)
New large incidents:	1
Large fires contained:	0
Uncontained large fires: **	5
Area Command Teams committed:	0
NIMOs committed:	0
Type 1 IMTs committed:	0
Type 2 IMTs committed:	1

** Uncontained large fires include only fires being managed under a full suppression strategy.

[Link](#) to Geographic Area daily reports.

This will be the last daily Incident Management Situation Report. This report will be posted every Friday at 0800 Mountain daylight time unless significant activity occurs.

Southern California Area (PL 3)

New fires:	17
New large incidents:	0
Uncontained large fires:	1

Rough, Sierra NF. Five miles north of Hume, CA. Timber, chaparral and tall grass. Active fire behavior with isolated torching, backing and creeping. Road, area and trail closures in effect.

Incident Name	Unit	Size		%	Ctn / Comp	Est	Personnel			Resources			Strc Lost	\$\$ CTD	Origin Own
		Acres	Chge				Total	Chge	Crews	Eng	Heli

Rocky Mountain Area (PL 1)

New fires:	3
New large incidents:	1
Uncontained large fires:	3
Type 2 IMTs committed:	1

Crooked Creek, Shoshone NF. IMT 2 (Greer). Twelve miles northwest of Dubois, WY. Timber. Minimal fire behavior.

* **South Fork 1**, Wind River Agency, BIA. One mile north of Fort Washakie, WY. Brush. Minimal fire behavior.

Smith Mountain, Rawlins Field Office, BLM. Forty miles southeast of Casper, WY. Timber. Minimal fire behavior with smoldering. Structures threatened. Reduction in acreage due to more accurate mapping.

Additional wildfire information is available through the Geographic Areas at <http://gacc.nifc.gov/>

Predictive Services Discussion: An upper level trough of low pressure over the Great Basin will move east into the northern and central Rockies with scattered showers and thunderstorms. In its' wake another short-wave trough and cold front will dive into the Pacific Northwest from British Columbia tonight. Elsewhere across the West a drying trend will develop along the Pacific Coast, with light offshore winds over California. Warming and drying will also spread into the desert Southwest. East of the Rockies, a deep trough of low pressure will begin to draw deep moisture in from Hurricane Joaquin, with widespread showers and thunderstorms over much of the eastern U.S. The exception will be the central and southern Plains where it will remain dry and breezy, but cooler.

This Day in History is a brief summary of a powerful learning opportunity and is not intended to second guess or be judgmental of decisions and actions. Put yourself in the following situation as if you do not know what the outcome will be. What are the conditions? What are you thinking? What are YOU doing?

Grant West Prescribed Fire – Hazard Tree Fatality October 2nd, 2004

Incident Summary: October 2nd 2004, a prescribed fire is planned in the Grant Grove Sub District of Kings Canyon National Park. This park has long been known for its active prescribed fire program and since 1981, has been home to the Arrowhead Hotshots. The unit being burned this day has been burned several times before. The predominant tree in this unit is White Fir, a high-risk species, which had suffered a considerable die-off due to a Tussock Moth infestation. The unit has been prepped and hose-lays installed. Numerous snags along the line have been evaluated for firefighter safety and holding concerns. Some hazard trees were cut down or lined. One white fir snag about 146 feet tall and 12 feet inside the line was considered sound by experienced firefighters and is left standing. Torching brush and short trees during the test burn send embers into the top of the snag and within minutes smoke and then flames are observed. The snag has become a hazard and a holding concern and it is decided that it needs to be felled. Class C-fallers are called over to size-up the tree; Daniel Holmes, an Arrowhead Hotshot, is the swamper. Because of its lean, it is decided to drop it across the line and to move the hose-lay so that it can be suppressed as a spot fire. Holmes and another faller pass under the snag on the fireline as they walk over to assist in moving the hose-lay so that they can then cut the tree. Several firefighters see the top of the snag fall and yell. They start to run but the falling tree top hits Holmes on the head and he is knocked out. He never regains consciousness.

To that date, Daniel Holmes would be the 20th firefighter killed by a snag since 1960.

Lessons Learned Discussion Points

The morning began with a safety briefing and most of the firefighters confirm that snag hazards were emphasized several times.

- If you were giving your crew a briefing about hazard trees in *your* area, what will your emphasis points be?

You and your crew are sizing up hazard trees in preparation for a prescribed burn in *your* area.

- What are the common high-risk species of trees there?
- Discuss how you will determine the soundness of the trees.
- What are the common indicators that they have become unhealthy/unsafe?

Knowing when the top of this tree would fall is impossible. The top of the snag had only been burning for less than 2 hours. The winds had been light.

- Would you have considered this tree as hazardous as it really was?
- Knowing that the top of the tree might eventually fall, what will you do to be ready for it?

Though there were 3 experienced fallers paying attention to the burning snag during its size-up, once the firefighters transitioned to moving the hose-lay there was not a dedicated lookout assigned for that task.

- How will you and your crew manage the safety of all firefighters when you are in a similar transition situation?
- How can you better expect the unexpected after reading this tragic accident?

Arrowhead Hotshot Daniel Holmes – 2004
