

**National Interagency Coordination Center
Incident Management Situation Report
Friday, December 4, 2015 – 0800 MT
National Preparedness Level 1**

National Fire Activity (Nov. 27 – Dec. 3)

Initial attack activity: Light (167 new fires)
 New large incidents: 2
 Large fires contained: 2
 Uncontained large fires:** 0
 Area Command Teams Committed: 0
 NIMOs committed: 0
 Type 1 IMTs committed: 0
 Type 2 IMTs committed: 0
 **Uncontained large fires include only fires being managed under a full suppression strategy.

Additional wildfire information is available through the Geographic Areas at <http://gacc.nifc.gov/>

Predictive Services Discussion: A series of weather systems will affect the northwest quarter of the U.S. this weekend with significant snowfall in the mountains and heavy rainfall for the Pacific Coastal region. Winds associated with these storms are expected to be gusty as the cold fronts move in from the west. Warm and gusty conditions are expected for the high plains region with downsloping winds while further north there will be a light precipitation event from the northern Plains through the Great Lakes region. Elsewhere east of the Rockies relatively mild conditions will develop with seasonal temperatures. The exceptions will be in New England this weekend where the first snowfall of the season is anticipated. Heavy rain and thunderstorms are expected for Florida along a stationary front that will persist into next week.

TRANSFER OF COMMAND

Operational Engagement Category

Risks to fireline personnel increase significantly during transfer of command periods regardless of the size or complexity of the incident. There is a high potential for fatalities, serious injuries, or incidents with potential during transfer of command periods (some have occurred in the past). Be proactive in mitigating the risks by proper implementation of LCES—Lookout, Communications, Escape Routes, and Safety Zones.

Factors for increased risks to fireline personnel during transition periods include:

- No, or poor, briefing of incoming personnel
- Lack of fire weather and behavior information, both forecast and observed
- Communications; face-to-face briefings may not be possible and radio frequencies may be overextended and/or changing due to the increased demands on the system.
- Initial attack resources may not have checked-in and the Incident Commander may not be aware of the number, type and location of all resources.
- Location of safety zones and escape routes may not be known and communicated to all resources.
- Not all Resources know who is in command.

Mitigation actions to take:

- Lookouts: Post and maintain your own lookouts.
- Communications: Maintain existing communications with your own and adjacent resources, as well as your original supervisor, while you are developing communications with incoming adjacent resources and your new supervisor.
- Escape routes and safety zones: Identify escape routes and assure incoming resources are aware of their locations; be aware that your original escape routes and safety zones may no longer be accessible due to changing fire behavior or your increased distance from them.
- Transition at the morning briefing
- Utilize the Incident Response Pocket Guide transition checklist
