

**National Interagency Coordination Center
Incident Management Situation Report
Friday, April 29, 2016 – 0800 MT
National Preparedness Level 1**

National Fire Activity (Apr. 22 – Apr. 28)

Initial attack activity: Light (416 new fires)
 New large incidents: 6
 Large fires contained: 12
 Uncontained large fires:** 6
 Area Command Teams Committed: 0
 NIMOs committed: 0
 Type 1 IMTs committed: 1
 Type 2 IMTs committed: 2

**Uncontained large fires include only fires being managed under a full suppression strategy.
[Link](#) to Geographic Area daily reports.

Southern Area (PL 3)

New fires: 203
 New large incidents: 2
 Uncontained large fires: 5
 Type 1 IMTs committed: 1
 Type 2 IMTs committed: 1

Rocky Mtn, Shenandoah NP. Transfer of command from IMT 1 (Dueitt) back to the local unit will occur tomorrow. Six miles south of Elkton, VA. Timber, brush and short grass. Minimal fire behavior with smoldering. Road, area and trail closures in effect. Precipitation occurred over the fire area. Last report unless significant activity occurs.

Whipping Creek Road, North Carolina Forest Service. Transfer of command from North Carolina IMT 2 (Smith) back to the local unit will occur today. Six miles north of Engelhard, NC. Chaparral. Minimal fire behavior with smoldering.

Silver Mine, National Forests in North Carolina. Three miles west of Hot Springs, NC. Hardwood litter. Active fire behavior with creeping and smoldering. Residences threatened.

Lone Mtn SF, Tennessee DOF. Started on private land five miles south of Wartburg, TN. Timber. Minimal fire behavior. Last report unless significant activity occurs.

Bluff Mtn, Tennessee DOF. Five miles west of Pigeon Forge, TN. Timber. Minimal fire behavior. Last report unless significant activity occurs.

* **Little White Oak Road**, Tennessee DOF. Started on private land five miles southeast of Jellico, TN. Timber. Active fire behavior. Last report unless significant activity occurs.

*** Changes in some agency YTD acres reflect more accurate mapping or reporting adjustments. ***

Additional wildfire information is available through the Geographic Areas at <http://gacc.nifc.gov/>

Predictive Services Discussion: An upper ridge over Canada will remain in place through the week. A low pressure system will slowly cross the West over the weekend, bringing cool and wet conditions to the region through Monday. Stormy conditions will also cross the central U.S. By midweek, the ridge will amplify, bringing warming and drying to most of the West while a trough develops over the Northeast. Cool weather will settle over the Great Lakes and the Northeast as a front slides south across the eastern States. Another trough will approach the West Coast by the end of the week.

EXTREME FIRE BEHAVIOR 2

Weather / Fire Behavior Category

Mild, moderate and EXTREME fire behavior has always been present in cases of shelter deployment. It is critical for firefighters to maintain situational awareness of live and dead fuel moisture conditions as well as predicted and current weather conditions. As fire behavior changes, it is critical to respond correctly to the changing situation.

- Discuss how the following factors can contribute or lead to extreme fire behavior:
 - Frost Kill: Has there been a late or unusually extensive freeze? Is the loading of frost-killed fuels high?
 - Drought Conditions: Live Fuel Moistures Index, KBDI, Soil Moisture Index, low humidity, high temperatures
 - Slope: Increases fire spread uphill, preheats fuels by convection, may channel winds

Sea Breeze/Foehn: Wind direction may vary throughout the day, humidity changes may occur; strong wind velocities may drive fire behavior to extremes.

- To aid situational awareness, track NFDRS live and dead fuel moisture outputs.
- Take hourly weather observations and track the hourly changes. By tracking fuel moisture and weather observations and using Fire Severity Related to Fuel Moisture Chart, firefighters can be alerted to those conditions that can lead to situations where there is a high potential for extreme fire behavior.
