

**National Interagency Coordination Center
Incident Management Situation Report
Saturday, July 9, 2016 – 0530 MT
National Preparedness Level 2**

National Fire Activity

Initial attack activity: Light (134) new fires
 New large incidents: 4
 Large fires contained: 2
 Uncontained large fires:** 8
 Area Command Teams Committed: 0
 NIMOs committed: 0
 Type 1 IMTs committed: 1
 Type 2 IMTs committed: 2

**Uncontained large fires include only fires being managed under a full suppression strategy.

Southern California Area (PL 3)

New fires: 28
 New large incidents: 1
 Uncontained large fires: 2
 Type 2 IMTs committed: 1

Pine, Los Padres NF. IMT 2 (Mills). Thirty miles northeast of Santa Barbara, CA. Timber, chaparral and brush. Moderate fire behavior with isolated torching, flanking and backing. Structures threatened. Road, area and trail closures in effect.

* **Fort**, Kern County Fire Department. One mile north of Grapevine, CA. Brush and tall grass. Active fire behavior with running. Structures threatened. Last report unless significant activity occurs.

Predictive Services Discussion: An unusually strong storm system will move into the Northwest, bringing unseasonably cold conditions to the region. Rain and a few thunderstorms will soak the northwestern U.S. Dry and windy conditions across the Great Basin and the central Rockies will precede the front. The Southwest will remain dry but a few thunderstorms are possible in the southern Rockies. Strong southerly flow ahead of the upper storm will warm the Plains while strong thunderstorms form over the Mississippi Valley along a weakening frontal system stretching across the South. Rain will move through the Great Lakes and New England. Temperatures in the northwestern U.S. will drop well below normal. Hot conditions will remain across the southern third of the nation and spread to the northern Plains. The Upper Midwest and New England will be mild to cool. Alaska will have scattered showers and thunderstorms across much of the state with gradual warming, especially in the Interior.

ESCAPE ROUTES 3 (LCES)

Operational Engagement Category

A primary objective of every operational fire plan is to keep firefighters out of entrapment situations. However, firefighters must always be prepared to escape quickly to a safety zone or deployment area. Consider the following during discussion of escape from possible entrapment.

- Have a plan that includes trigger points!
 - **Trigger Point:** An observable event that triggers a pre-determined action.
Example: Temperature reaches 98 Degrees and RH goes into single digits the crew will follow the established escape route to the safety zone.
- Reassess escape routes throughout the operational period.
 - Has access to escape routes become more difficult as the day progresses?
 - Do you have more than one escape route?
 - Are all escape routes clearly marked?
 - Are all firefighters familiar with the escape routes?
- During an escape time will be short. Describe considerations you might make in this situation such as:
 - Maintain control of all critical equipment such as PPE and radio... jettison gear that will not aid in your escape!
 - Maintain contact with all other crewmembers!
- Describe your vision of a good safety zone. How is that different from a deployment area?
- You should always know the location of your escape routes leading to and safety zones and deployment areas.
