

**National Interagency Coordination Center
Incident Management Situation Report
Monday, July 11, 2016 – 0530 MT
National Preparedness Level 2**

National Fire Activity

Initial attack activity: Light (140) new fires
 New large incidents: 2
 Large fires contained: 1
 Uncontained large fires:** 12
 Area Command Teams Committed: 0
 NIMOs committed: 0
 Type 1 IMTs committed: 1
 Type 2 IMTs committed: 4

**Uncontained large fires include only fires being managed under a full suppression strategy.
[Link](#) to Geographic Area daily reports.

Rocky Mountain (PL 2)

New fires: 11
 New large incidents: 1
 Uncontained large fires: 3
 Type 2 IMTs Committed: 2

Cold Springs, Boulder County. IMT 2 (Greer). Two miles northeast of Nederland, CO. Timber. Extreme fire behavior with short crown runs and group torching. Numerous residences threatened. Evacuations, road, area and trail closures in effect.

* **Hayden Pass**, Pike & San Isabel NF. IMT 2 (Esperance). Twenty miles southeast of Salida, CO. Timber. Extreme fire behavior with short crown runs and torching. Structures threatened. Evacuations in effect.

Browning, Crook County. Fifteen miles southwest of Sundance, WY. Timber and brush. Minimal fire behavior. Structures threatened.

LFE 4 Mile, White River Field Office, BLM. Ten miles south of Rangely, CO. Brush and short grass. Minimal fire behavior. Sage-grouse habitat threatened.

Predictive Services Discussion: An upper storm system will move along the Canadian border to the Plains. Rain and scattered mountain snow showers will gradually decrease across the northern Rockies with rain and thunderstorms moving into the Plains. The system will produce strong southerly winds across the Plains. Most of the West will remain dry. Scattered thunderstorms will develop across the deep South. Cold air will spill across the Rockies into the High Plains while temperatures across the northwestern U.S. begin a slow warmup. The southwestern U.S. will remain hot and dry. Very hot conditions will continue in the deep south while mild to warm weather remains over the northeastern quarter of the country. In Alaska, scattered showers and thunderstorms will decrease and move to the southeast. Temperatures will moderate slightly.

FREQUENT SPOT FIRES ACROSS THE LINE

Weather / Fire Behavior Category

There are few watchout situations that state more clearly how much potential your fire has for rapid, uncontrolled growth. Consider the following questions if you are getting spot fires across your line:

- Can you handle increased spotting? List some ways you can keep ahead of spot fires (gridding the green, lookouts, etc.)
- What is your probability of ignition doing? Is it increasing or decreasing?
- Do you have a plan for long-range spotting? In what fuel type and under what conditions will you likely have long-range spotting? What types of plans can you think of for handling long-range spotting?
- Is help available if necessary? What kinds of resources will you have in place or order to handle spot fires?
- If fire behavior increases, is your position still defensible? Discuss what type of action you might take if a spot fire takes off.
- Do you have more than one safety zone in case one gets cut off? Describe how you might have multiple safety zones.
- Do the primary lookouts have a good view of the situation? Discuss who might be acting as a lookout (e.g., crew member, air resources, etc.) and how you will get good information from that person. (Are you relying on an air attack that is busy with air tankers?)
- Where are you in the burning period? Talk about how your tactics may vary from finding spot fires early in the day to later into the evening. Review Probability of Ignition (PIG) and what it can tell you about spotting potential.
- To reduce the risk, be ready to retreat. Keep your guard up even if spotting has not occurred for a few hours. Review fires where you have had frequent spot fires and what you learned about controlling them.

Have an idea? Have feedback? Share it.
